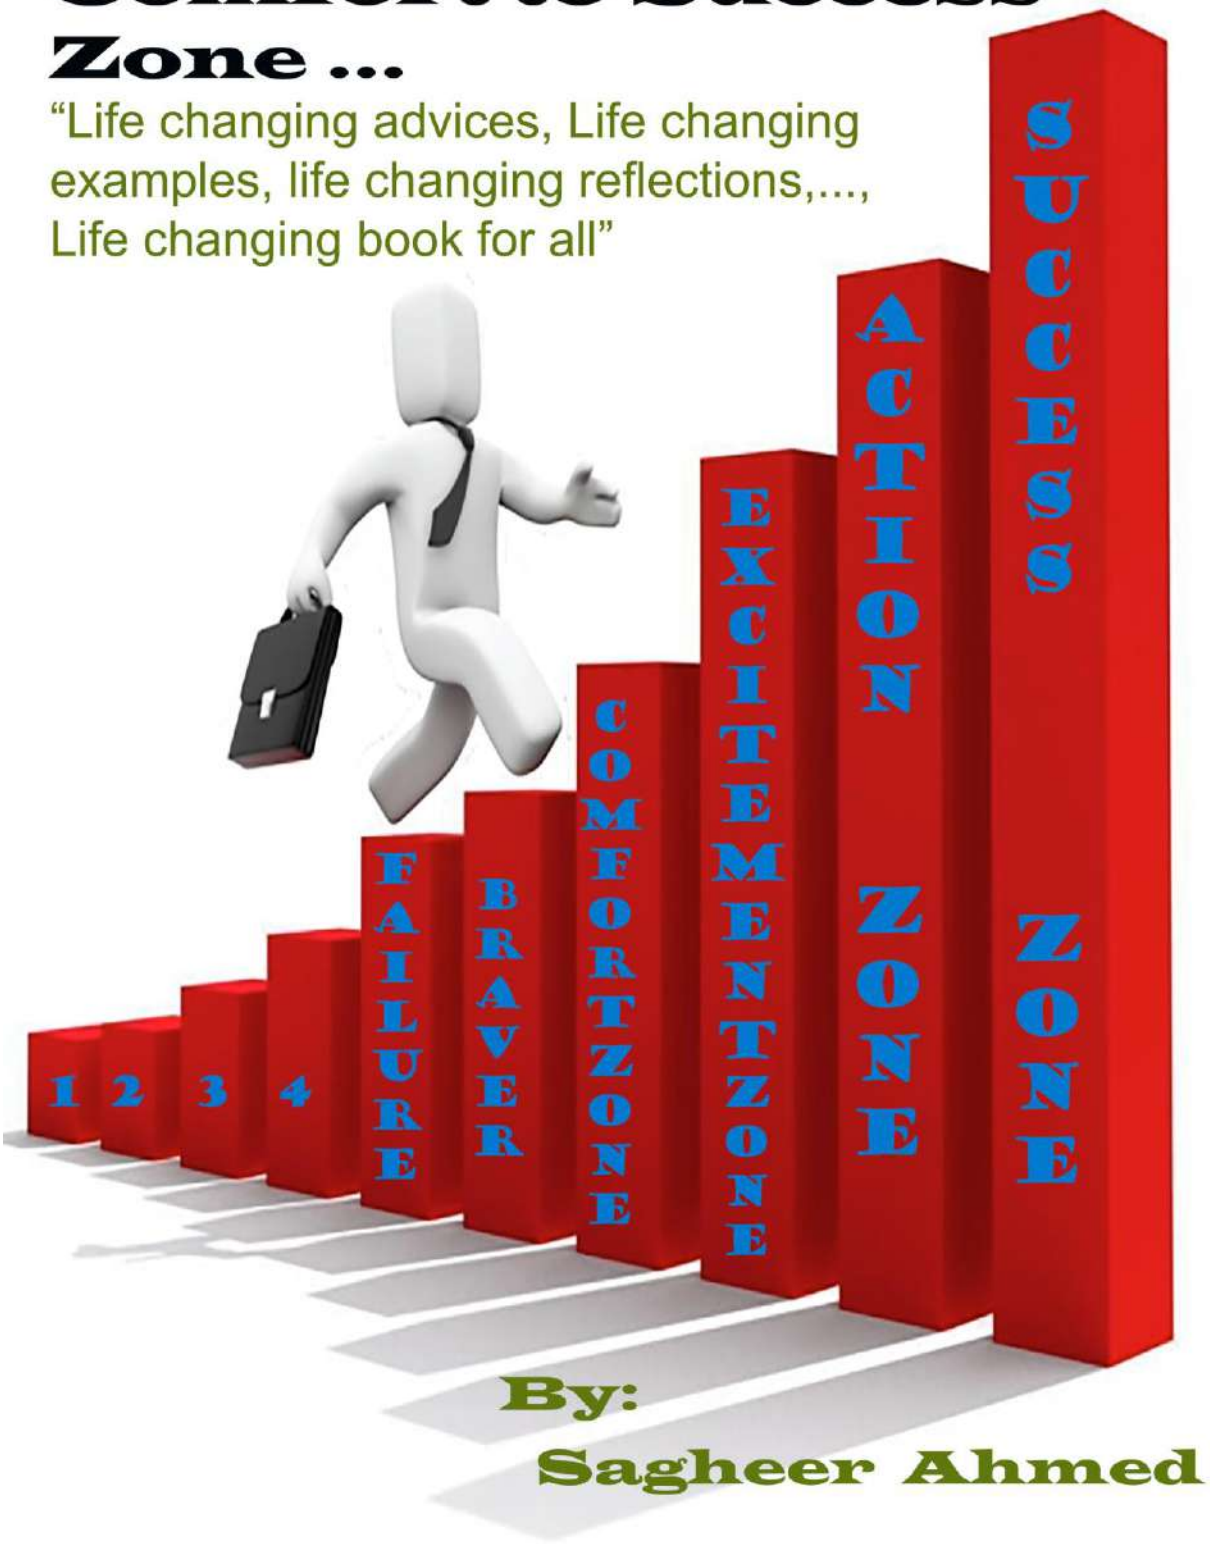
A Journey from Comfort to Success Zone ...

"Life changing advices, Life changing examples, life changing reflections,..., Life changing book for all"



By:
Sagheer Ahmed

A Journey from Comfort Zone to Success zone

Sagheer Ahmed

Dedicated

To those who want to leave comfort zone

Sagheer Ahmed

Contents:

1-Introduction

2-Brain

3-Endocrine system

4-Conscious and sub-conscious minds

5-How they work together!

6-The mind in action

7-Directing your focus

8-The unconscious mind

9-How to change your life!

10-Meaning of habit

11-Role of hormones in habits

12-Steps for changing habits

13-Comfort zone

14-Story of frog in a well

15-Comfort zone destroy your productivity

16-Habits of comfort zone peoples

- Excuses
- Apply law of dosra
- Focus only on needs
- Poor knowledge of aims/visions
- Too much negative thoughts
- They think they know all
- Many types of personality disorder
- Dependent
- Eat and drink only for survival
- They have lot of free time
- Poor knowledge of medicine

Sagheer Ahmed

- **Un-natural beliefs**
- **Waiting for ideal conditions**
- **Wait for miracles**
- **Phobias**
- **Rigid**
- **Too much ignorant**
- **Poor knowledge of religion**

17-Excitement zone

18-Example of Pakistani hockey team

19-Brain, Mind and learning!

20-Habits of excitement zone peoples:

- **Accept their mistakes**
- **Inspire with others achievements**
- **Broken the rigidity**
- **Sort out aims and needs**
- **Compare gathering**
- **Un-complete projects**
- **Find the difference in healthy mind**
- **Willing to risk**
- **See/Watch motivational videos**
- **Learn reaction and response**
- **Not interested to discuss problems**
- **Find skills**

21-Steps for jumping into action zone

22-Action zone

23-Story of Nick Vujicic

27-Habits of Action zone peoples:

- **Well define aim**
- **Apply motivational videos**
- **Give answers by actions**

Sagheer Ahmed

- Discuss winners
- Day starting and day closing according to planner
- Eat healthy food w.r.t him/her own aim
- Design believes by the study of thinkers
- Use skills
- Replace excuses to strength
- Eliminate negative thinkers from the friends' list
- Catch opportunities from the road
- Right use of 'NO'
- Do exercise daily
- Apply rule of positive thinking
- Do independent work
- Steps for jumping from action zone to success zone

28-Success zone

29-Example of 'Miracle Man' i.e. Morris Goodman

30-Habits of success zone people

- Content base life
- Help the others
- Always speaks and acts positively
- Each minute of life is well-define
- Open minded
- Design and apply life planner
- Enjoy the technology
- Obedient to Allah
- Spread peace and love
- Two alternate days are not similar
- Design and perform own fitness exercise
- Design video channel and share own success stories
- Try to generate new skills
- Produce leaders not followers
- Mentor of many persons

Sagheer Ahmed

- **Has so many ideas**
- **Pride for all**
- **Write own auto-biography**
- **Minimum 25 small but complete projects per year**
- **Minimum 5 big projects per year**
- **Peaceful end**

Sagheer Ahmed

About this book:

Alhamdulillah! By the grace of Allah and support of my family and team members, I launched one more book ***"A journey from comfort zone to success zone"***. Positive thinking and positive life style are the great gifts from Allah, so when I sit for reading, found many complete ideas which transform my life as well as our life…and this book is one of them.

As you know! what is the meaning of niyaat (watch YouTube my channel) so first of all you make a niyaat of learning then read this book.

Major theme of this book is to look internally and realize that you alone are responsible for your success. Even if you were born with a silver spoon in your mouth or in a beggar family, but you still have the ability to drink water and eat meal.

The lesson to understand is that you/we are responsible for 100% of what happens in you/our lives. You/I control far more than you/I think you/I do. It's tempting to look outward instead of acknowledging you/our personal shortcomings, but taking personal responsibility is the trait that all high performers share. You/we are not only in control of your/our actions, but also your/our responses to outside stimuli. These two components firmly put you/us in control of all aspects of your/our life.

The idea is that every outcome you/I experience in life, whether positive or negative, the result of not only your/our direct actions, but how you/I respond to external events, usually setbacks, that those actions cause.

For greater success, you/we need to realize that a successful outcome is the result of a series of events that you/we can completely control. If you/I don't achieve the outcome you/I want, you/I simply need to start modulating your/our responses until you/we get it.

Sagheer Ahmed

Most people imagine that their actions are all they can control, but it is not the complete story. If you/I experience a rejection following a job interview (the external event), you/I can respond by asking for feedback and generally treating it as an opportunity to improve, but what usually happens is that people blame the external event for their lack of results without realizing that their response to, it was either poor or non-existent.

If you/I fail at the job interview (external event), you/I might blame the economy, your/our interviewer's favoritism, your/our lack of standing, or inherent racism-and your/our outcome will remain purely negative and bitter. But if you/we can contact the interviewer, ask for tips, and apply those tips to crafting a better resume and interview presence (response), then you/we will have made a negative outcome into a positive one.

This formula to success highlights the importance of your/our response to hardships are outside of your/our control. You/we can choose to pout and point fingers, or move on and learn from the experience. Just respond not react.

These external events are sometimes admissible, and sometimes they do guarantee a relative lack of success. But if these external events were the sole factor in the path to success, then why have others on your exact path succeeded when you have not? (great point for thinking) Because their response to the negative event was just as important as the event itself.

Successful people look at every negative external event as a chance to improve, learning and respond on it accordingly. They qualitify and quantify (create unique structure according to situation) their responses to the external events until they get the positive outcome they desire.

Sagheer Ahmed

They not only allow, but actively use, external events to shape their responses and eventual outcomes (use external events for learning data). They change their ways of thinking, shatter preconceptions, improve skills and communication, and modify their behaviour in the interest of a desired outcome.

Average or failure people let themselves be commanded by their laziness and poor habits. They fall into patterns of behaviour that they believe are unchangeable, and start viewing personality traits as line on a stone and un-improvable because they lack the willpower to do so. They limit them-selves their realm of possibility and are masters of rationalizing poor and infertile behaviour and habits with barren mind-set.

More important for you/us, these rigid behaviour force them to ignore potentially feedback, they behave like a reflector. They fail to improve, learn, and end up wasting time by excuses or/and state of sadness that there's nothing they can ever do. If you/we look your/our surrounding finds many real time examples…

Now I want to tell all the readers of this book; what are in this book! it covers the maximum habits of losers and winners, this book having (or cover the following topics) following chapters:

In introduction I define Brain, Endocrine system, conscious, sub-conscious and unconscious mind, and then Comfort Zone, Excitement zone, Action zone, Success zone: In these chapters we define the habits of these zones' peoples, examples of any successful personality, Bad examples of these zones 'peoples, and also give the formulas of escaping from it…

In boxes give life changing quotes and reflections for learners…

Beauty of this book that all things are tangible and realistic, not fabricated or hypothetical, all examples

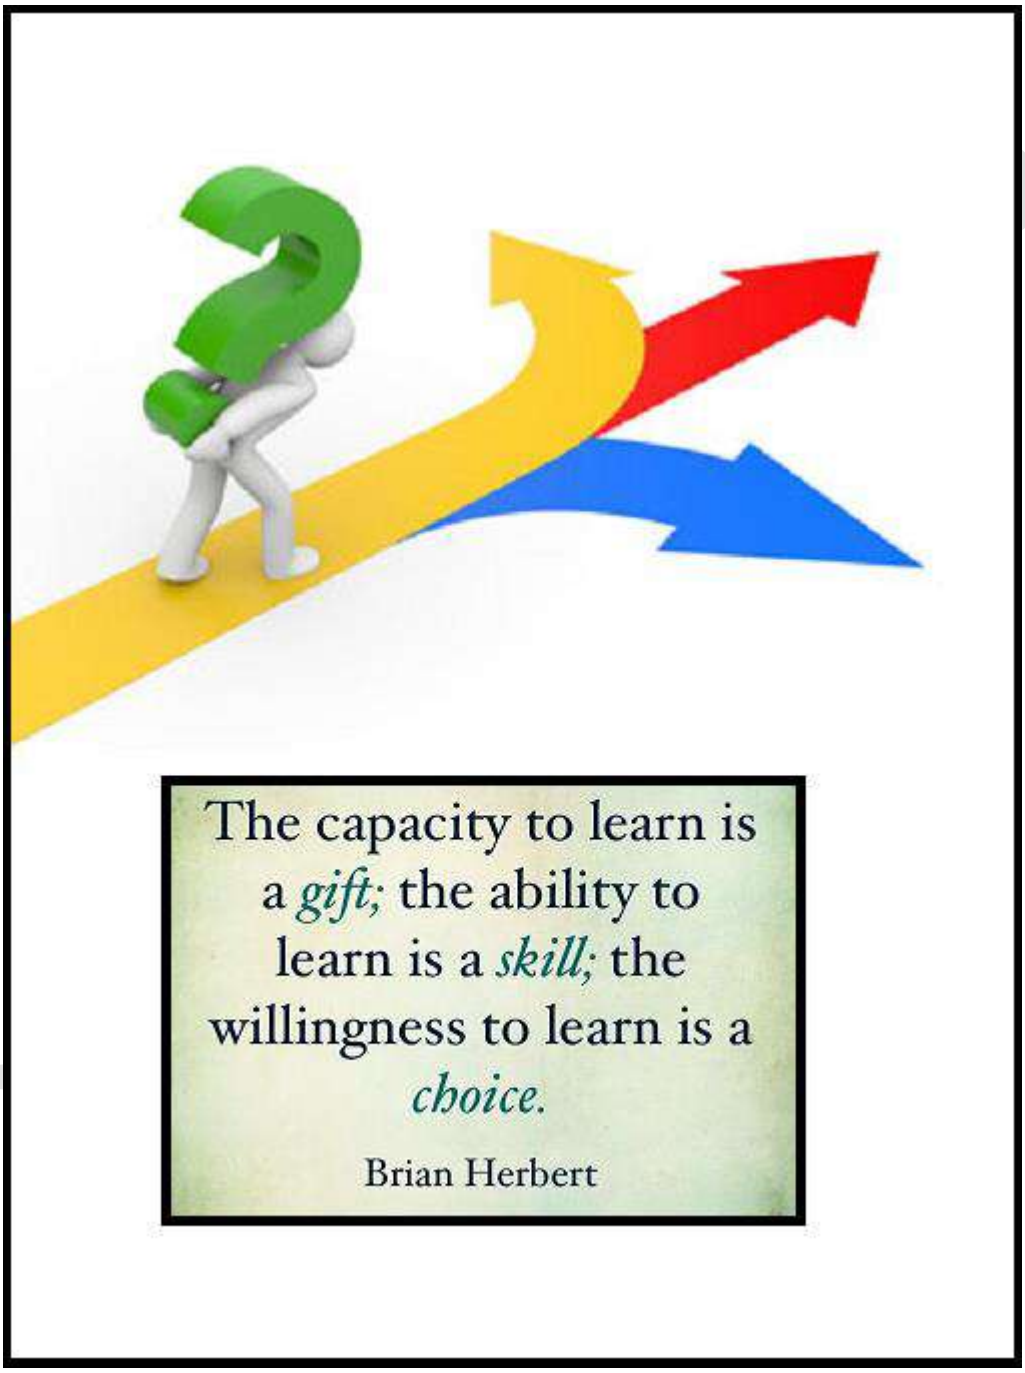
Sagheer Ahmed

are practical but not the holy, so first you use it,then comments on it…

If you feel any error and weakness in this book then please tell me without any shyness, I shall be proud on you…May Allah bless all of you…

Thirsty of your pray…

Sagheer Ahmed



The capacity to learn is a *gift;* the ability to learn is a *skill;* the willingness to learn is a *choice.*
Brian Herbert

Introduction:

You know! What is the meaning of 'HU-MAN'…'Hu' means Divine and 'MAN' means Mind and when we combine these two meaning then we get a brain which is come from divine…!

You are too important to Allah therefore He created you…

Most aspects of human physiology are closely analogous to corresponding aspects of animal physiology. The human body consists of the legs, the torso or trunk, the arms, the neck, the head (we can say that it skeleton) and bio-chemicals. A grown man/woman body consists of about 100 trillion (10^{14}) cells. The most commonly defined complete human body system is the combination of the nervous, the cardiovascular, the circulatory, the digestive, the endocrine, the immune, the integumentary, the lymphatic, the musculoskeletal, the reproductive, the respiratory, and the urinary. It's a huge network of the system of systems.

But according to our topic only three headings are important for us…which are as following:

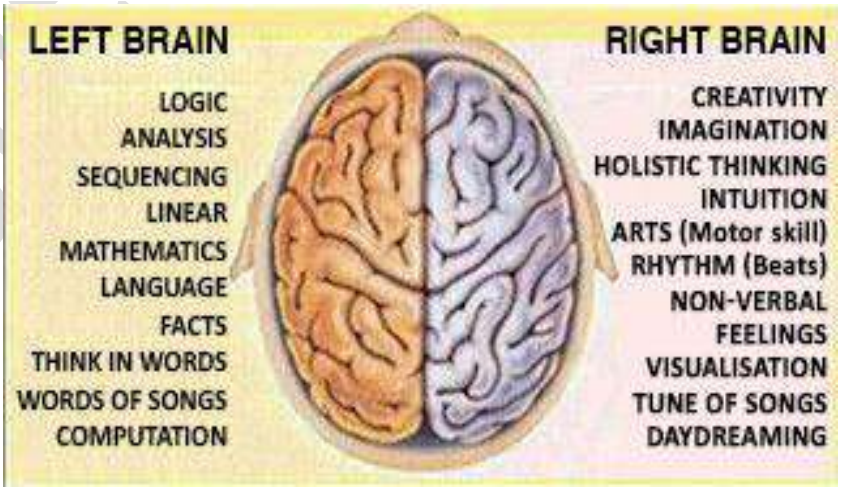
Brain:

The **human brain** is the hub of the human nervous system, and with the spinal cord makes up the central nervous system. The brain consists of the cerebrum (the principal and most anterior part of the brain in vertebrates), the brainstem (the central trunk of the mammalian brain) and the cerebellum (the part of the brain at the back of the skull in vertebrates). This beautiful management system controls most of the activities of the body, processing, integrating, and coordinating the information it receives from the sense organ(an organ of the body which responds to external stimuli by conveying impulses to the sensory nervous system), and making decisions as to the

instructions sent to the rest of the body. The brain is contained in, and protected by, the skull(bone like structure) of the head. The cerebrum is the largest part of the human brain. It is divided into two cerebral hemispheres. The cerebral cortex is an outer layer of grey matter(the darker tissue of the brain and spinal cord, consisting mainly of nerve cell bodies and branching dendrites),covering the core of white matter(the paler tissue of the brain and spinal cord, consisting mainly of nerve fibers with their myelin sheaths). The cortex is split into the neocortex (a part of the cerebral cortex concerned with sight and hearing in mammals, regarded as the most recently evolved part of the cortex) and the much smaller allocortex(The term allocortex refers to one of two types of cerebral cortex defined on the basis of cytoarchitecture and fetal development). The neocortex is made up of six neuronal layers, while the allocortex has three or four.

A study found that two hours of silence per day prompts cell development in the hippocampus region of the brain, where memories are formed…

Each hemisphere is conventionally divided into four lobes- the frontal, temporal, parietal, and occipital lobe. The frontal lobe is associated with executive functions (self-regulation skills are the mental processes that enable us to plan, focus attention, remember instructions, and juggle multiple tasks successfully) while the occipital lobe is dedicated to vision. Within each lobe, cortical areas are associated



with specific functions, such as the sensory, motor and association regions. Although the left and right hemispheres are broadly similar in shape and function, some functions are association with one of side, such as language in the left and visual-spatial ability in the right. The hemispheres are connected by nerve tracts, the largest being the corpus callosum.

Endocrine System:

The **endocrine system** is the collection of glands of an organism that hormones(chemical messenger) directly into the circulatory system to be carried towards distant required organs. In humans, the high-lighted endocrine glands include:

1-The Pineal gland

2-The Pituitary gland

3-The pancreas

4-The Ovaries (in female)

5-The testes (In male)

6-The thyroid gland

7-The Parathyroid gland

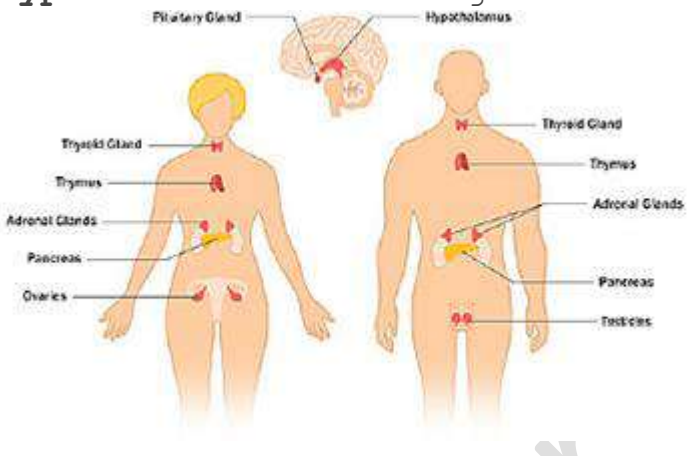
8-The Adrenal gland

In vertebrates(an animal of a large group distinguished by the possession of a backbone or spinal column, including mammals, birds, reptiles, amphibians, and fishes), the hypothalamus(a region of the forebrain below the thalamus which coordinates both the autonomic nervous system and the activity of the pituitary, controlling body temperature, thirst, hunger, and other homeostatic systems, and involved in sleep and emotional activity) is the neural control center for all endocrine systems. The field of study dealing with the endocrine system and its disorders is endocrinology, a branch of internal medicine.

Key Points related to our book:

Many different glands make up the endocrine system. The hypothalamus, pituitary gland, and pineal gland are in our brain. The thyroid and parathyroid glands are in our neck. The thymus is between our lungs, the adrenals are on top of our kidneys, and the pancreas is behind our stomach. Ovaries (for a woman) or testes (for a man) are in pelvic region.

Hypothalamus: This organ connects your endocrine system with your nervous system. Its main responsibility is to tell your/our pituitary gland to start or stop making hormones.



Pituitary: This is the "master" gland of your/our endocrine system. It uses information it gets from your/our brain to "tell" other glands in your/our body what to do. It makes many different important hormones, including growth hormone; prolactin, which helps breastfeeding moms make milk; and luteinizing hormone, which manages estrogen (any of a group of steroid hormones which promote the development and maintenance of female characteristics of the body) in women and testosterone(a steroid hormone that stimulates development of male secondary sexual characteristics) in men.

Pineal: This gland makes a chemical called melatonin. It helps your body get ready to go to sleep.

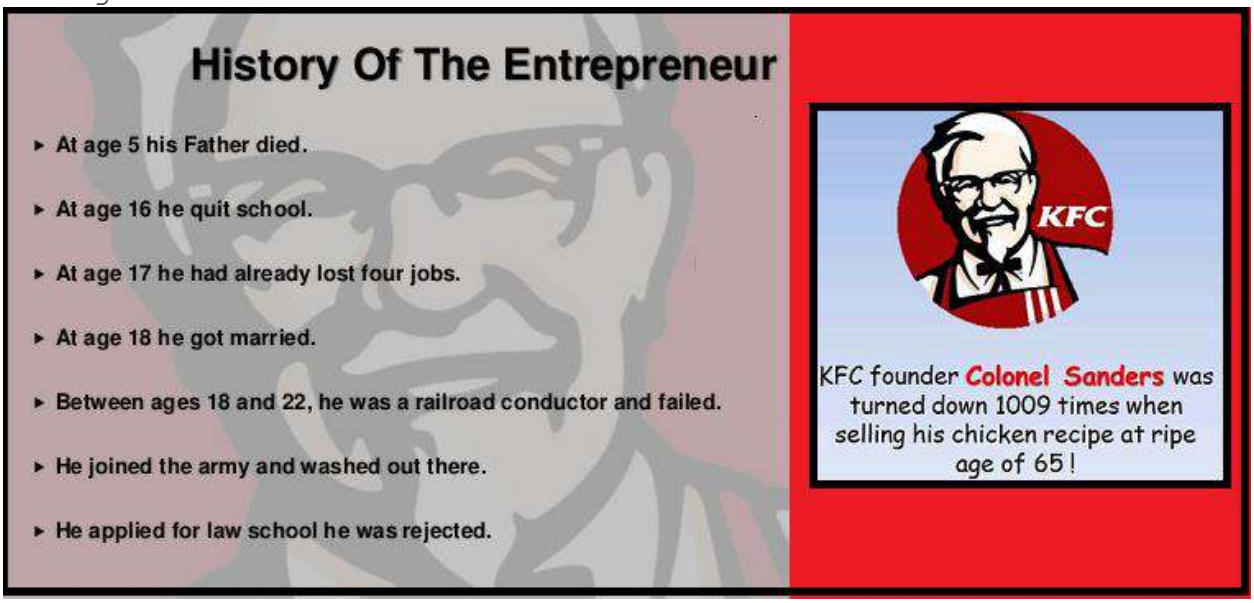
Thyroid: This gland makes thyroid hormone (The **thyroid gland** uses iodine from the foods you eat to make two main hormones: Triiodothyronine (T3) Thyroxine (T4)), which controls your metabolism. If this gland doesn't make enough (a condition called hypothyroidism), everything happens more slowly. Your/our heart rate might slow down. You/we could get constipated. And you/we might gain weight. If it

makes too much (hyperthyroidism), everything speeds up. Your heart might race. You could have diarrhea. And you might lose weight without trying.

Parathyroid: This is a set of four small glands behind your thyroid. They are important for bone health. The glands control your levels of calcium and phosphorus.

Thymus: This gland makes white blood cells called T-lymphocytes that fight infection and are crucial as a child's immune system develops. The thymus starts to shrink after puberty.

Adrenals: Best known for making the "fight or flight" hormone adrenaline (epinephrine), these two glands also make corticosteroids. These are hormones that affect your/our metabolism and sexual function, among other things.



Pancreas: The pancreas is part of both your/our digestive and endocrine systems. It makes digestive enzymes that break down food. It also makes the hormones insulin and glucagon. These helps ensure you/we have the right amount of sugar in your/our bloodstream and your/our cells.

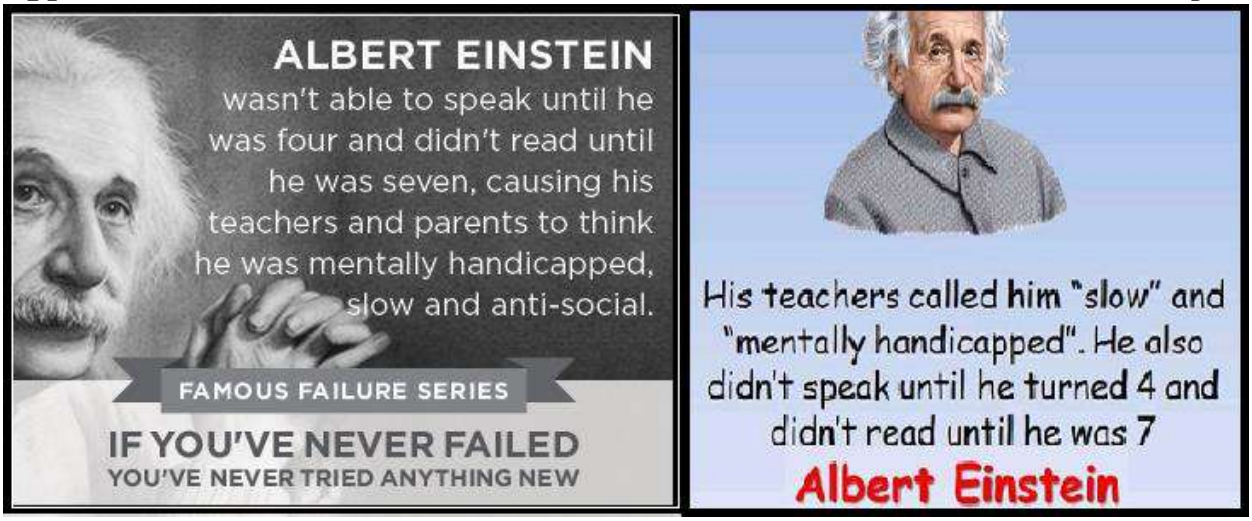
If you/we don't make any insulin, which is the case for people with type 1 diabetes, your/our blood sugar levels can get dangerously high. In type 2 diabetes, the pancreas usually makes some insulin but not enough.

Ovaries: In women, these organs make estrogen and progesterone. These hormones help develop breasts at puberty, regulate the menstrual cycle, and support a pregnancy.

Testes: In men, the testes make testosterone. It helps them grow facial and body hair at puberty. It also tells the penis to grow larger and plays a role in making sperm.

Health Issues

As you/we get older, it's natural to notice some things related to your/our endocrine system. Your/our metabolism tends to slow down. So, you/we might gain weight even though you/we haven't changed how you/we eat or exercise. Hormonal shifts also explain, at least in part, why you/we are more likely to have heart disease, osteoporosis, and type 2 diabetes as age.



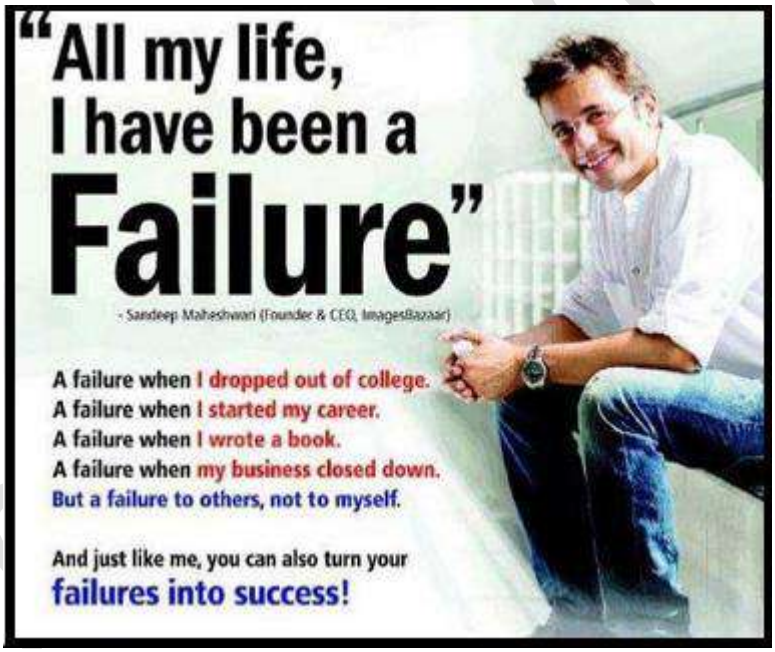
No matter how old you/we are, stress, infections, and being around certain chemicals can also mess with parts of your/our endocrine system. And genetics or lifestyle habits can increase your/our chances of an endocrine disorder like hypothyroidism, diabetes, or osteoporosis.

Hormones are the chemical messengers…

Special features of these glands are, in general, their ductless nature, their vascularity, and commonly the

presence of intracellular vacuoles or granules that store their hormones. In contrast, exocrine glands, such as salivary glands, sweat glands, and glands within the gastrointestinal tract, tend to be much less vascular and have ducts or a hollow lumen. A number of glands that signal each other in sequence are usually referred to as an axis, for example, the hypothalamic pituitary adrenal gland axis.

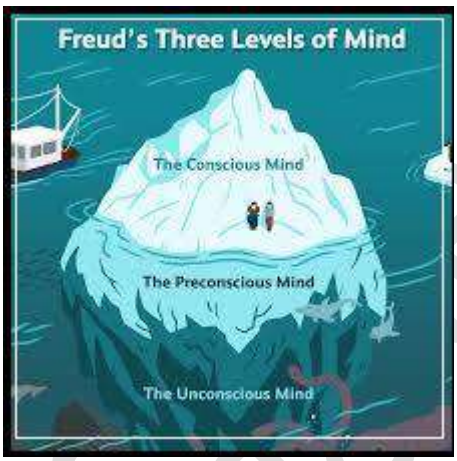
In addition to the specialized endocrine organs mentioned above, many other organs that are part of other body systems, such as bone, kidney, liver, heart and gonads, have secondary endocrine functions. For example, the kidney secretes endocrine hormones such as erythropoietin(a hormone secreted by the kidneys that increases the rate of production of red blood cells in response to falling levels of oxygen in the tissues) and renin(an enzyme secreted by and stored in the kidneys which promotes the production of the protein angiotensin).Hormones can consist of either amino acid complexes, steroid(any of a large class of organic compounds with a characteristic molecular structure containing four rings of carbon atoms (three six-membered and one five). They include many hormones, alkaloids, and vitamins), eicosanoids (any of a class of compounds (as the prostaglandins, leukotrienes, and thromboxane) derived from polyunsaturated fatty acids (as arachidonic acid) and involved in cellular activity. The endocrine system is in contrast to the exocrine system, which secretes its hormones to the outside of the body using ducts. As



opposed to endocrine factors that travel considerably longer distances via the circulatory system, other signaling molecules, such as paracrine factors involved in paracrine signaling diffuse over a relatively short distance.

Information and knowledge about conscious and sub-conscious minds:

The concept of three levels of mind is nothing new. Sigmund Freud, the famous Austrian psychologist was probably the first to popularize it into mainstream society as we know it today. Even though his theories have subsequently been widely disputed in Psychology gatherings because they are very hard to scientifically prove (even now!), Freud nonetheless created a useful model of the mind, which he separated into 3 tiers or sections- the conscious mind(10%) , the preconscious(not well defined), and the unconscious mind(80%).



The best way I have found to illustrate the concept of the three minds is by using a triangle. If you imagine at the very tip of the triangle is your conscious mind. It occupies only a small portion of space at the top, a bit like an iceberg where only a fraction of it is showing above the water. It probably represents about 10% of your brain capacity.

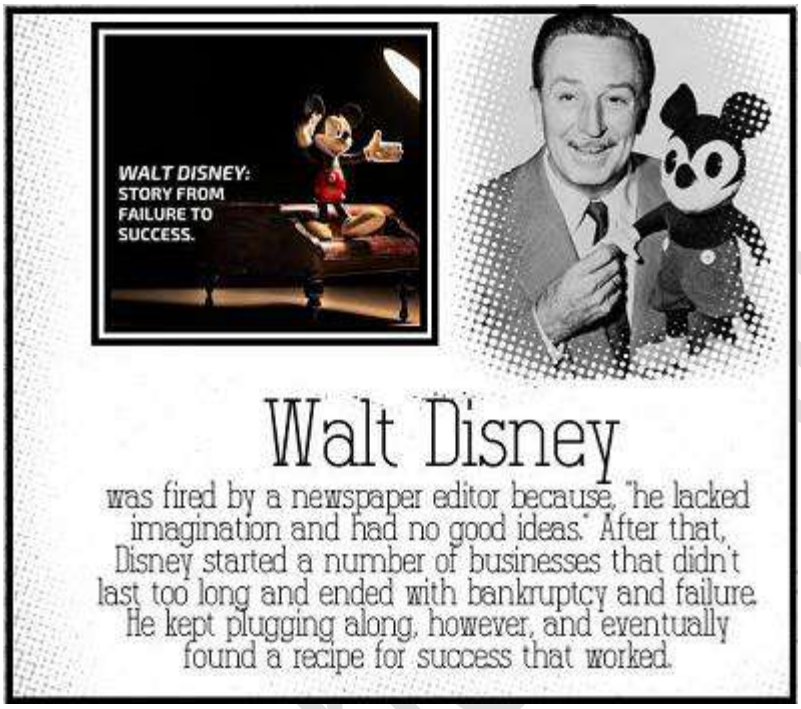
Below this is a slightly larger section that Freud called the preconscious, or what some refer to as the subconscious. It is much larger than the conscious mind and accounts for around 50-60% of your brain capabilities.

The section below this is the unconscious mind. It occupies the whole width of the base of the triangle and

fills out the other 30-40% of the triangle. It is vast and deep and largely inaccessible to conscious thought, a bit like the dark depths of the ocean.

How They Work Together

Your/our conscious mind is what most people associate with who you/we are, because that is where most people live day to day. But it's by no means where all the action takes place. The conscious mind includes such things as the sensations, perceptions, memories, feeling, and fantasies inside of our current awareness. ... Things that the conscious mind wants to keep hidden from awareness are repressed into the unconscious-mind.



Your/our conscious mind is a bit like the captain of a ship standing on the bridge giving out orders. In reality is different, it's the crew in the engine room below deck (the subconscious and the deeper unconscious) that carry out the orders. The captain may be in charge of the ship and give the orders but it's the crew that actually mentor of the ship, all according to what training they had been given over the years to best do so (i.e. faith, filters and decoder of mind).

The conscious mind communicates to the outside world and the inner self through speech, pictures, writing, physical movement, and thought (by direct or indirect).

The subconscious mind, on the other hand, is in charge of our recent memories (R.M is a system for temporarily storing and managing the information required to carry out complex cognitive tasks such as learning, reasoning, and comprehension), and is in continuous contact with the resources of the unconscious mind(It is defined in contrast to short-term and working memory or recent memory, which persist for only about 18 to 30 seconds).

The unconscious mind is the ware-house of all types of data, memories and past experiences, both those that have been repressed through trauma and those that have simply been consciously forgotten and no longer important to you/us. It's from these memories and experiences that our/your beliefs, habits, and behaviors are formed.

The unconscious constantly communicates with the conscious mind via our subconscious, and is what provides us with the meaning to all our interactions with the world, as filtered through your beliefs and habits. It communicates through feelings, emotions, imagination, sensations, and dreams (in one sentence we/you can say pain and pleasure).

The Mind-ware in Action

The following explanation may help to clarify the concept of how the three minds work a little more.

If you/I imagine that mind is like a computer …

Your/our conscious mind is best represented by the keyboard and monitor. Data is inputted on the keyboard

and the results are thrown up on the monitor screen. That is how your/our conscious mind works – information is taken in via some outside (or internal) stimulus (or sensor) from your/our environment and the results are thrown up instantaneously into your/our consciousness.

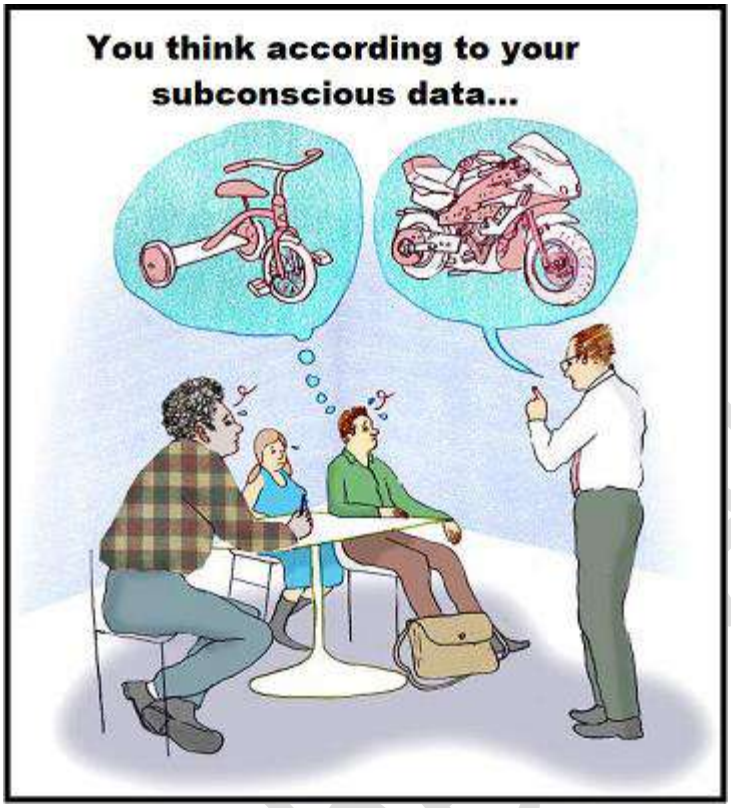
Your/our subconscious is like the RAM (Random Access Memory) in your computer. For those who don't know, RAM is the place in a computer where programs and data *that are currently in use* are kept so they can easily be reached quickly by the computer processor. It is much faster than other types of memory, such as the hard disk or CD-ROM.

Dark chocolate, honey and eggs can help increase blood flow, prevent depression and increase your energy…

Now you/I can compare it, subconscious works in the same way. Any recent memories are stored there for quick recall when needed, such as what your/our telephone

number is or the name of a person you/I just met. It also holds your/our current programs that you/I run every day, such as your/our current recurring thoughts, behavior patterns, habits, and feelings.

Your/our unconscious is like the hard disk drive (it is a non-volatile computer storage device containing magnetic disks or platters rotating at high speeds. It is a secondary storage device used to store data permanently, random access memory (RAM) being the primary memory device) in your computer. It is the long-term storage place for all your/our data, memories and programs that have been installed since birth.



Our/Your unconscious mind (and ultimately your/our subconscious mind) then use previous storage programs to make sense of all data which is received from the outer world and to keep you safe and ensure your survival. The logic of these two minds is that if it worked in the past and you/I survived, then it will help you/I get through similar situations by the same means, no matter how misguided, painful, and unhelpful the results may be to your/our personally in the outside world(Using of these minds are really a great science).

Our long journey begins with this point:

As mentioned above, these sections and their functions have been great debated over the years by many other psychologists, philosophers, and scientists, because it's very hard to empirically prove they exist. Despite all this, I still find it's a great example to use, and at the end of the day if it works for you/I and makes sense, then that's all that matters.

Wrong perception about conscious and sub-conscious mind (therefore peoples wrong use it…)

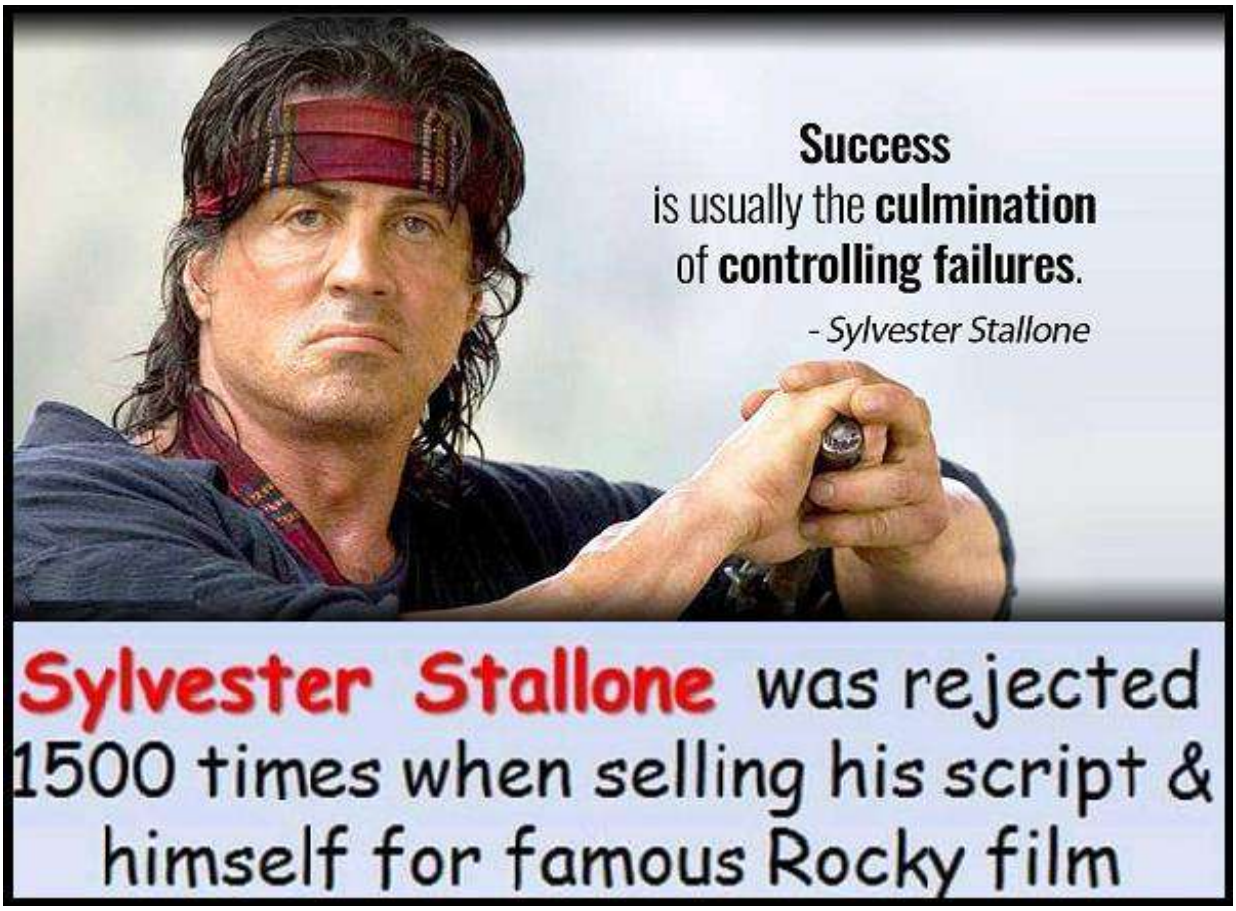
If you/I ask most people to define what the conscious mind does or role of conscious mind, you/I will get varying answers according to their awareness levels. Some say what distinguishes it from the subconscious (or even the unconscious) is awareness.

But to say the subconscious is unaware is totally wrong. It has been well documented that you/I can be influenced by your/our surroundings or what people say even when your/our conscious mind is totally out of it, such as when you/we are under anesthetic or asleep. And what about when you/I drive to some targets but when you/I get there you/I have no memory of the trip. In those situations, it's your/our subconscious that stays aware and performs the necessary functions.

Most of the problems in your life are due to two reasons: You think without act or act without think…

Another argument running in our environment is that the conscious mind is where you/I do all your/our thinking and logical or complicated reasoning. But that too doesn't entirely distinguish it from your/our subconscious or unconscious. Your/our unconscious minds are the storage place of all your/our memories, emotions

(or feeling) and habits (repeated routines) and are in fact very good at reasoning and logic.



Look at the example, when you/I were/was a baby. Your/our conscious mind had not yet developed enough to test and measure all the information from your/our environment, so at this age it sits in the background and it's your/our subconscious and unconscious that does all the data gathering and reasoning – identifying that the bottle or nipple is a source of food, that crying gets you/I attention, that cuddles from mum means you/I are/am safe. In this stage it's your/our other two minds hard at work forming logical patterns of association (habits, beliefs, and emotions) that help you to survive.

By far the best explanation that you/I have found for the two most powerful functions your/our fully

developed conscious mind can do that the other two can't is …

1. Its ability to direct your/our focus.
2. Its ability to imagine that which is not real.

It's these two very important abilities that can change your life. Let's take a quick look at each …

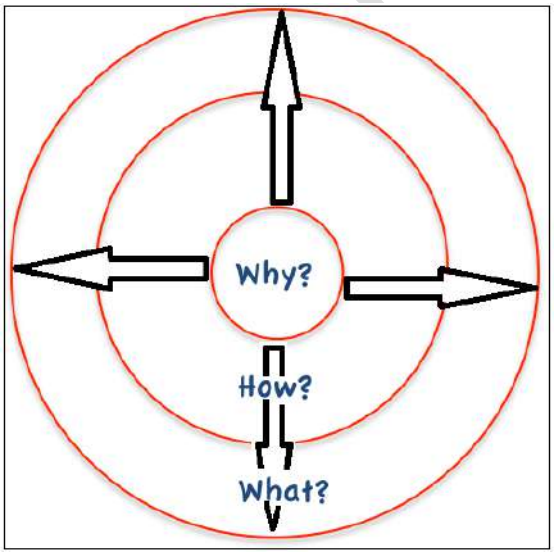
Narrow-down toward target:

While your/our conscious mind has a much stronger sense of awareness of your surroundings than your sub-conscious mind, but at the same time sub-conscious mind continuously help/support to conscious mind, for example, even when asleep, it really does just obey orders from your/our conscious mind. If all you/I do is focus your/our conscious thoughts continually on negative things, then your subconscious will obediently deliver the feelings, emotions, and memories that you/I have associated with that type of thinking. And because those feelings will become your/our reality, you/I can then be caught up in a never-ending loop of negativity, fear, and anxiety, constantly looking for the bad in every situation (its negative side of this powerful combination).

Take, another example, when you/I are/am lying in bed late at night and hear something go "bump" in the night. If you/I let your/our thoughts and imagination wander to all the horrible things that might happen, then your/our subconscious will throw up the feelings, emotions, and memories of past events that you/I have associated with those thoughts and feel this is happening un real life. It's your/our subconscious' way of protecting you/I and preparing you for fight or flight in those situations.

On the other hand, if you/I consciously tell yourself/ourselves and direct your/I focus to more rational, calming thoughts, then the feelings will subside or disappear.

Some people find it quite easy and natural to direct their thoughts towards a more positive outlook on life and every situation (positive thinking is the key of happy life). It really depends on the type of programming(mind-ware) your/I subconscious and unconscious has had since birth (same like hard disk sectors in computer). Remember another good example – do you/I move towards pessimism or optimism, negative thinking or positive thinking, happiness or anger, or somewhere in between? Identifying which way, you/I sway is the start to improving it by the help of working on conscious and sub-conscious mind.



This ability (adopt by good practice) of your/our conscious mind to direct your/our attention and awareness is one of the most important powers you/I have, and to create change in your/our life you must learn to control what you/I consciously focus on.

But how do you/I do that? The actual skill of directing your/I focus is quite simple … all it comes down to is making a choice. Thinking, how you will think! and what thoughts you/I will allow into your/my mind will determine your/our goals to aims. It can literally be used for good or evil, for constructive or destructive means.

Your/Our mental state of thoughts are probably the only one true freedom you/we have in this world that you/we can actually control. Human can be physically trapped in prison in absolute inhumane conditions and yet still be free in his own mind.

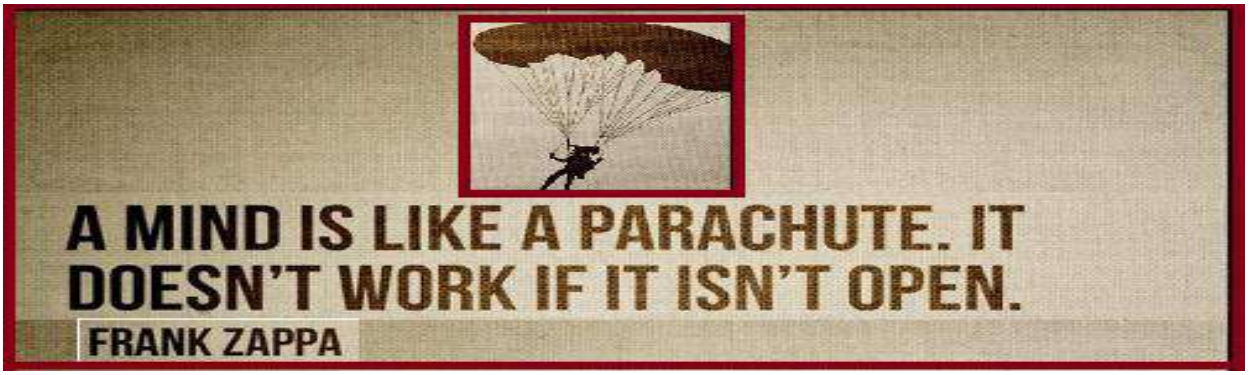
By using inner world:

The other important ability of the conscious mind is the use of visualization. Your/our mind can literally imagine something that is totally new and unique – something you/I have never physically experienced before.

Pain and pleasure create filters and decoder of brain…

At any other view point, your/our subconscious-mind can only offer versions of what memories it has stored of your/our past experiences.

But the really clear trick is that the subconscious-mind can't distinguish between that which the conscious-mind imagines and that which is real, so whatever is brought up by conscious-mind imagination and intently focused on, also brings up all the emotions and feelings that are associated with that image in your/our mind for you to experience.



Steps of thinking:

- First sight
- It has any relation to my aim or not…
- How much time to given it?
- Think with 5 stars' references…
- Always think in close format…
- After thinking note down its key points.
- Transform these points in your own language, own examples, and own picture…
- Use these points in daily life.

Another example, if you/I have every day dreamed before about winning game of lottery, or perhaps looked forward to being with that someone special you/I love, then you/I would have felt the joy that those thoughts had conjured up in your/our mind, even though you/I knew intellectually it wasn't physically happening at that in short time. *But* your/our subconscious *thought it was* happening to you/us, and that's why it offered those feelings and emotions it associated with those thoughts. It truly is a beautiful gift we have!

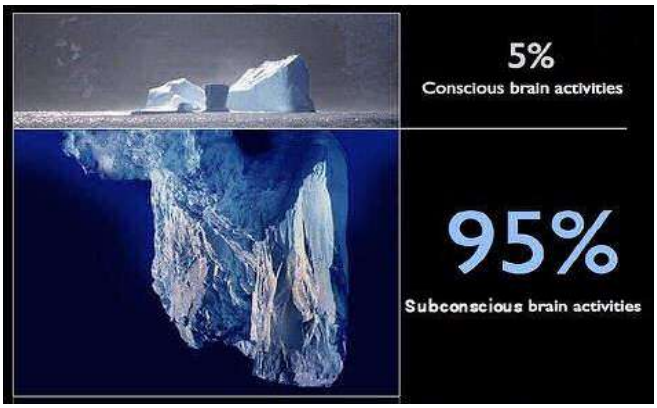
Imagination and Visualization can be used to create some amazing creative results. In one research study find that; sporting study three groups of people were tested on their ability to improve skill about their free throw accuracy in basketball. They were tested at the start of the experiment and at the end.

One group was busy in to physically practice free throws for 20 days on the daily basis for few hours. The second group was not allowed to train at all (adopt rest format). The third group spent 20 minutes a day getting into a relaxed state and only imagining (or positive thinking) themselves performing the free throws. They were also taught that if they missed in their minds, to adjust slightly and see themselves getting it the next time.

Results of this experiment were interesting, incredible and learnable. The group that physically practiced each day improved their score by **24%**. The second group who didn't practice understandably didn't improve at all or **0%** improvement. But the third group, who had only visualized (or imagination) doing it, actually improved their score by an amazing **23%** – nearly as much as group one! So, conclusion is that you/I imagine you/I act or act both are approximately are same.

A strength, consists of 4 components:
1-Natural talents (5%)
2-Education (degree'10%'+life'30%)
3-Experince (25%)
4-Skills (30%)

First, we learn some points about subconscious mind:



Your/our subconscious is the work desk of your/our mind. Controlling and directing, it is the key to personal change.

As I said earlier, your/our subconscious is a bit like the RAM in your/our computer (electronic brain). As we define earlier – RAM is the term used for the short-term memory

in a computer, and its job is to hold the programs and information(data) that are currently in use so they can be reached quickly and easily by the computer processor. It's a lot faster than the other types of memory, such as the hard disk or CD-ROM.

Your subconscious works in a similar way to computer RAM. It holds short term memory and current daily used programs.

Sub-conscious mind and our life:

Other than short term memory, the subconscious also plays a vital role in our daily life.

It works professional at ensuring you/I have everything you/I need for quick recall and access to when you/I need it. For example –

- Memories – such as what your/our telephone numbers is, how to drive a vehicle without having to consciously think about it, what you/I need to get from the shop on the way home etc.
- Daily routine works, and response(reaction)such as behaviors, habits, mood…
- Filters or decoders (such as beliefs and values) to run information(data) through to test their validity according to your perception of the world…
- Sensations taken in via your/our 5 senses and what it means to you/us…

If it doesn't happen to have a filter or reference point in its RAM for some bits of information that come in, then it has a direct line to the storage place of the mind – the unconscious. It will ask the unconscious to pull out the programs that it best associates with the incoming data to help make sense of it all.

One of the beauties of subconscious mind is that it constantly at work, staying a lot more aware of your/our surroundings than you realize. In fact, according to the NLP (Neuro-Linguistic Programming) communication model we are assaulted with over 2 million bits data every second. If your/our conscious mind had to deal with all that you would very quickly become overwhelmed and not be able to get anything done.

At mile 20 I thought I was dead. At mile 22 I wished I was dead. At I knew I was dead. At mile 24 I knew I was dead. At mile 26.2 I realized I had become too tough to kill…

Alternatively, your/our subconscious filters out all the unnecessary information and delivers only that which is needed at the time, around 7 chunks of information. It does all this behind the scenes so you/I can perform your/our daily work uninhibited. And it does this as logically as it can, based on the programs it has access to in your unconscious.

And as discussed earlier, it then communicates all the results into consciousness with emotions, feelings, sensations and reflexes, images and dreams. It doesn't communicate in words but by emotions.

With the relation of sub-conscious:

One of the beautiful things about the subconscious-mind (and one which you/we need to take advantage of to affect change) is … it obeys orders!

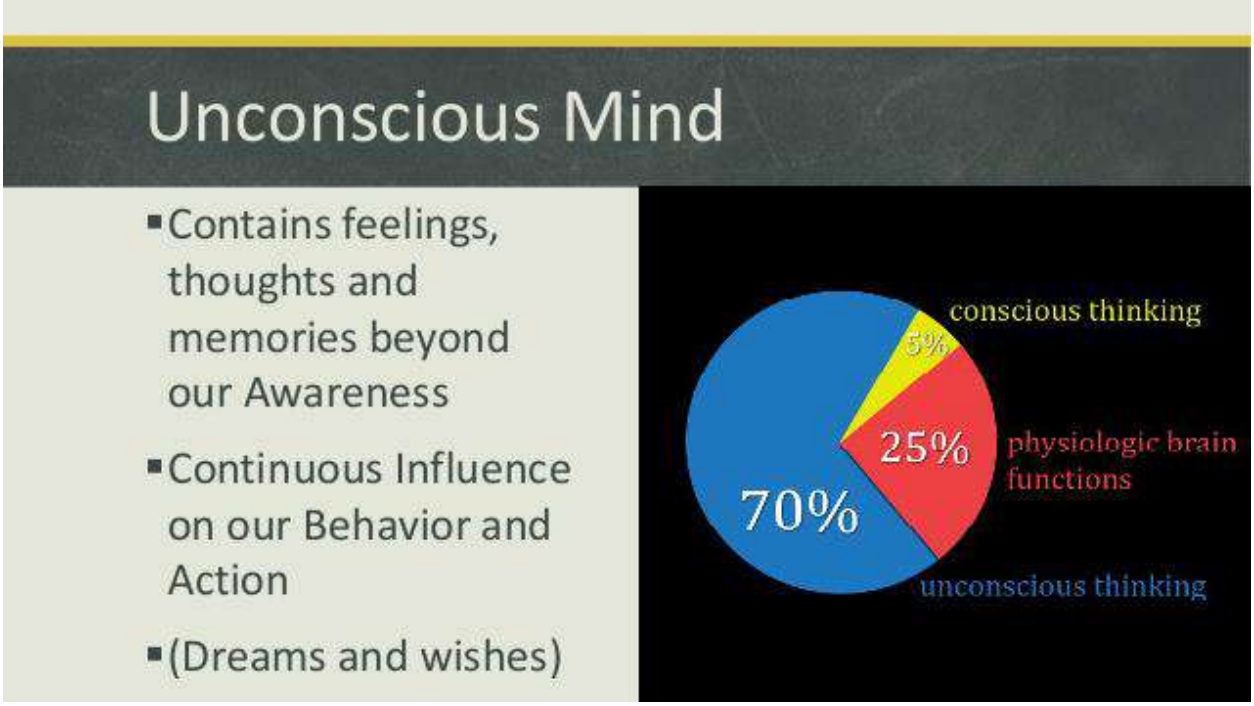
You/we often fallibly think that the subconscious-mind is in charge and you/we are merely at its mercy. In fact, it's the complete opposite. Your/our conscious mind gives it the direction, the environment if you/I like, for which it operates in. The subconscious-mind will only

deliver the emotions and feelings of what you/I mostly think about.

You/I think of in one moment and your/our entire life will be changed. In most cases your/our inbuild programs have too much energy attached to them to change point to point. It can be done though – such as after a gigantic life altering event or if enough pain (or pleasure) is associated with the old behavior – but without a major shift like that it is likely the old programs will reemerge.

The unconscious mind and our life:

The unconscious mind is very similar to the subconscious mind in that it also deals with memories. But there is a difference between the two.



If you/I remember the symbol of the triangle you/I used to describe the levels of the human mind, then you/I will remember that the unconscious sits a layer deeper in the

mind under the subconscious. in spite of the fact that the subconscious-mind and unconscious-mind have direct links to each other and deal with similar things mostly, the unconscious mind is really the basement room or storage room which is some time use for operation room, or the underground library if you/I like, of all your/our memories, habits, and behaviors. It is the storehouse of all your/our deep-seated emotions that have been programmed since birth.

Unconscious v/s subconscious:

Too much confusion existing in the mind of researchers; what is the correct term – subconscious or unconscious.

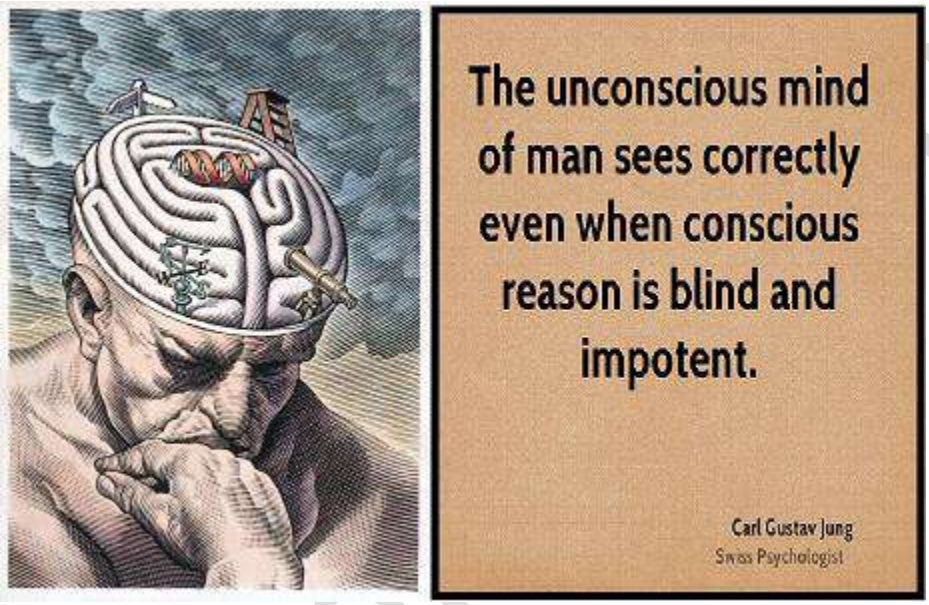
Unconscious is the term usually preferred by Psychologists and Psychiatrists to refer to the thoughts you/we have that are "out of reach" of our consciousness (you/we are not remember it by wish). It shouldn't be confused with the medical term for unconscious, which means knocked out or anesthetized, although in a depth both definitions do have similar qualities.

For a popular account, the unconscious-mind is the storage place for all your/our memories that have been repressed or which you/we don't wish to recall (mostly but not necessarily). A traumatic event in our childhood or teenage that has been blocked out is an example, but it doesn't have to be so serious as this. It could be something very distant like what you/I had for lunch on your/our first day of school or what the name was of the childhood friend you/I played with a couple of times.

It's your/our memory that you/we can't pull out at your/our choosing. It's there existed, but you/we can't remember it no matter how do you/we try! Certain psychoanalytical methods (or meditation practices) can bring back these memories (such as autosuggestion) or it

can be triggered by a particular event (a scent, a familiar place, picture, event etc.)

One more important point to remember at this time, is that you/we cannot, by choice, remember anything in your/our unconscious-mind without some special event or technique. This is the unconscious-mind-set.



The subconscious-mind, on the other hand, is almost the same, but the major difference is you/we can choose to remember. The memories are closer to the surface and more easily accessible with a little focus.

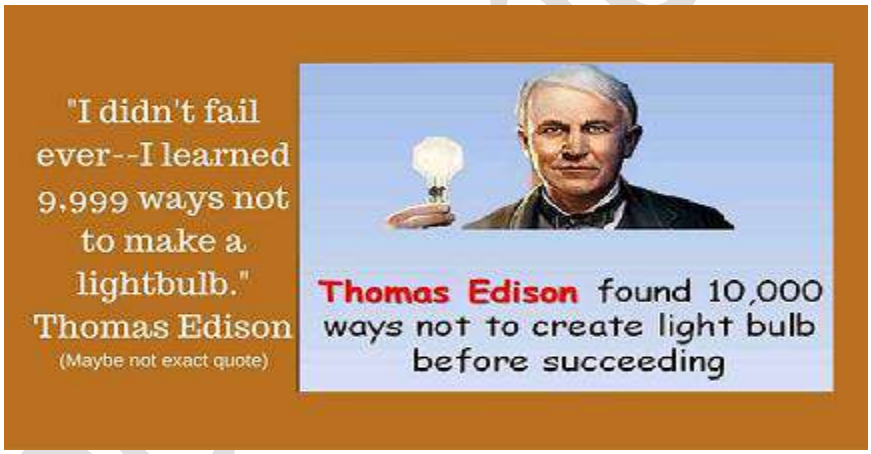
The successful man is the average man, but FOCUSE…

One more example, if you/I were to ask any person to remember what their phone number is, then you/I could easily bring that into conscious thought. The most interesting thing is that before you/I asked to recall it, you/I had no conscious-mind thought of it at all. It was stored in your/our subconscious-mind available for ready recall when needed, a bit like RAM in a computer because it's something that you/we require quite regularly to remember (at night try practice all day events).

If, however, it wasn't important to you/us to recall your/our phone number that often then it may be stored a bit deeper, and as a result when you/we are asked for your/our phone number on the spot you/I might struggle to remember it.

Some use full examples:

By many dimensions, the unconscious-mind deals with approximately all the same tasks as the subconscious-mind e.g. memory, habits, feelings, emotions, and behaviors. The difference between the two mind-sets, however, is that the unconscious-mind is the source of all these programs that your subconscious-mind uses.



It is the place where all your/our memories and experiences since birth have been stored. By the help of these memories that your/our beliefs, habits, and behaviors are formed and reinforced over time.

Change what you can change…Accept what you cannot change…

Life transformation method:

If you/we want or wish to affect change or modified in your/our life at a required level, then you/we will have to work on your/our programs that are held in the unconscious mind. There are specialized ways to make that happen, and if you/we have read all books, then you/we

will know that the point to start doing that is in the conscious-mind.

By continuously being in charge of your/our own thoughts through directing your/our focus and using visualization, you/I can influence what programs the subconscious-mind steadily runs. Do this often enough (and with enough emotional energy) then it will start to reprogram(redesign)your/our unconscious internal representation and belief system or faith.

Study of nature

If an egg is broken by an outside force life ends, if broken by an inside force life begin, meaning of this creative change must be starts from inside not outside, work on your inside…

Habits
Niyaat
+
Will
Actions
Repeat 40 days

Chapter # 02 Habits

Steps of learning…
1-Do not react suddenly…
2-Start thinking which has been listen….
3-Which is not clear, raise question on it…
4-Which is clear, then act on it…
5-Which is proven by act then teach to others…

What is the meaning of habits?

The American Journal of Psychology (1903) defines "habit, from the view-point of psychology, [as] a more or less fixed way of thinking, willing, or feeling acquired through previous repetition of a mental experience. Habitual behavior often goes unnoticed in persons exhibiting it, because a person does not need to engage in self-analysis when undertaking routine tasks (daily task). Habits are sometimes compulsory or some time default. New behaviors can become automatic through the process of **habit formation.** Old habits are hard to break and new habits are hard to form (this is called cognitive rehabilitation process) because the behavioral patterns which humans repeat become imprinted in neural pathways, but it is possible to form new habits through repetition.

When behaviors are repeated in a consistent context, there is an incremental increase in the link between the context and the action. This increases the automaticity of the behavior in that context. Features of an automatic behavior are all or some of.

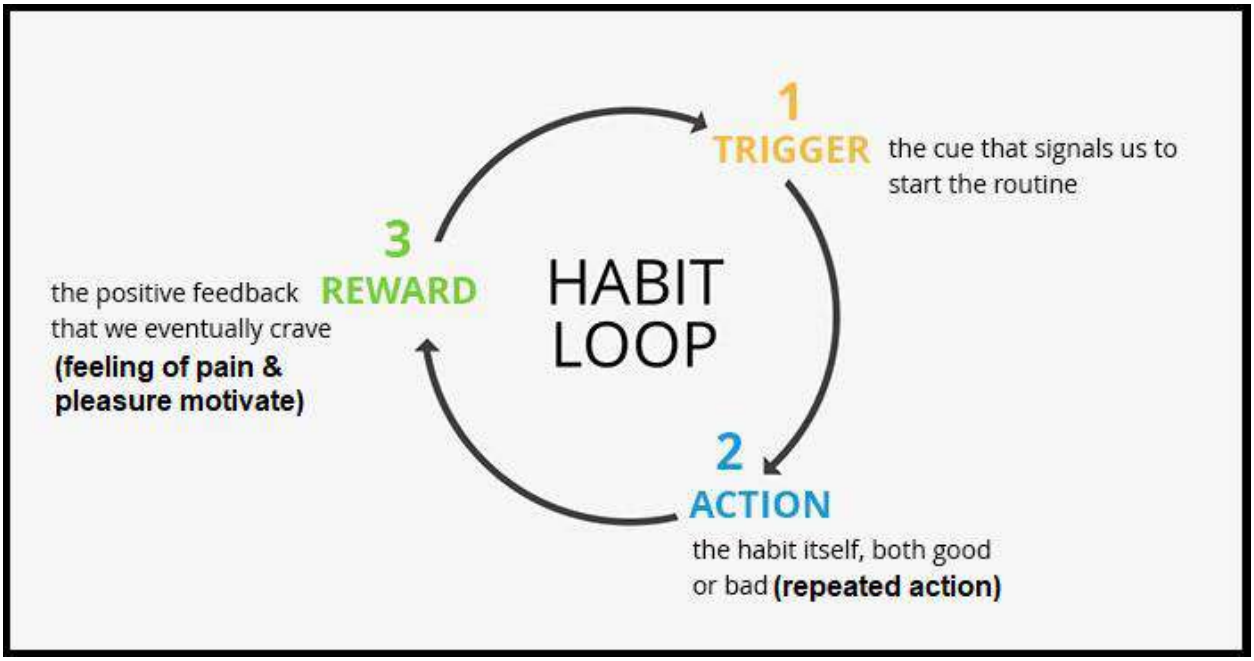
When you repeat any work regularly 40 days so it becomes your habit…

Habit formation is the process by which a behavior, through regular repetition (mostly repeat within 24 hours), becomes automatic or habitual. This is creating

a pattern as an increase in automaticity with number of repetitions up to an asymptote (a path or a straight line that continually approaches a given curve but does not meet it at any finite distance, in brain same like hard-disk of computer). This process of habit formation can be slow. Lally *et al.* (2010) found the average time for participants to reach the asymptote of automaticity was 66 days with a range of 18-254 days.

Mostly, every habit starts with a psychological pattern called a "habit loop," which is a three-part process. First, there's a cue, or trigger, that tells your brain to go into automatic mode and let a behavior unfold.

The Second; "Then there's the routine, which is the behavior itself," Duhigg tells *Fresh Air*'s Terry Gross. "That's what you/we think about when you/we think about habits."
The third step, is the reward: something that your/our brain likes that helps it remember the "habit loop" in the future.



Neuroscientists have traced our habit-making behaviors to a part of the brain called the basal ganglia (a group of structures linked to the thalamus in the base of the brain and involved in coordination of movement), which

also plays a vital role in the development of emotions, feeling, memories and pattern recognition. Decisions, meanwhile, are made in a different part of the brain called the prefrontal cortex. But as soon as a behavior becomes automatic, the decision-making part of your brain goes into a sleep mode of sorts.

Your/Our hormones' status play an important role in habit making…

A variety of digital tools, online or mobile apps, have been introduced that are designed to support habit formation. For example, **Habitica** is a system that uses gamification, implementing strategies found in video games to real life tasks by adding rewards such as experience and five stars review of such tools, however, suggests most are poorly designed with respect to theory and fail to support the development of automaticity.

Shopping habits are particularly vulnerable to change at "major life moments" like graduation, marriage, birth of first child, moving to a new home, and divorce. Some stores use purchase data to try to detect these events and take advantage of the marketing opportunity.

Some habits are known as "keystone habits" (these habits are "the soil from which other habits can grow". Keystone habits aren't just a new habit, like drinking water right after you wake up; they're a platform off of which other habits can grow. For example, I work out every morning at 6 am), some examples are; identifying as the type of person who takes care of their body and is in the habit of exercising regularly, can also influence eating better and using credit cards less. In daily life, safety can be a keystone habit that influences other habits that result in greater productivity.

Psychology says, pain makes you stronger. Fear causes you to become braver. Heartbreak makes you wiser…

That's why it's easy — while driving or parallel parking, let's say — to completely focus on something else: like the radio, or a conversation you/we are having.

"You/we can do these types of complex behaviors without being mentally aware of it at all," and one more important point, the capacity of you/our basal ganglia: to take a behavior and turn it into an automatic routine."

Research have shown that people will perform automated behaviors — like pulling out of a driveway or brushing teeth — the same way every single time, if they're in the same environment. But if they take a vacation, it's likely that the behavior will change.

You do control your mind or mind control you…

You/I will put your/our shoes on in a different order without paying any attention to it, because once the cues change, patterns are broken up.

That's one of the reasons why taking a vacation is so relaxing: It helps break certain habits or certain pattern.

You/We can use above quality in many places If you/we want to quit smoking, you/we should stop smoking while you/we are on a vacation — because all your/our old cues and all your/our old rewards aren't there anymore. So, you/I have this ability to form a new pattern and hopefully be able to carry it over into life.

Hormones, habit and our life:

Our mind received massages by the help of hormones, for example estrogen stimulates the release and uptake of serotonin, dopamine and other neurotransmitters that help elevate our mood and here also progesterone helps reduce anxiety, stress and insomnia, and testosterone helps improve memory, and mood. These hormones are present in

both men and women to different degrees and scales, and the way they change throughout the month and your/our lives impact your/our brain and habits. Therefore, harmonizing hormones with bio-identical hormone therapy (hormones that are molecularly identical to our real hormones) and natural supportive care, such as herbs and nutrients, is important in order to reap the benefits and continue to make healthy habit choices. Bear in mind, though, balance is essential since too much can cause a whole array of other problems.

Habits *can be positive or negative, but they're usually not destructive. While there may be similarities* ***between*** *a* ***habit*** *and an* ***addiction****, there are* ***differences****. A* ***habit****, however, can turn into an* ***addiction****. Losing control is usually the line that defines the* ***difference****, is more complex than habitual behavior. ... Unlike a* ***habit*** *such as brushing our teeth, you/I have almost no control over our impulsive desire to repeatedly engage in an* ***addiction****. Although* ***addictive*** *substance abuse negatively affects your relationships, job and health, you/we are unable to stop the behavior…*

Changing unhealthy habits is not a matter of willpower, but a matter of shifting our hormones' status, which will in turn shift your/our brain and re-establish healthier habits. Once this is accomplished, we will see our habits line up with our goals.

Steps for changing habits:

1-Start with the basic belief and faith…revisit it.

2-Reinforce your belief by adding new and more powerful references e.g. Let's say you have decided never to eat meat again to strengthen your resolve, talk to people who have chosen a vegetarian or vegan life style: what reasons prompted them to change their diet, and what have been the consequences on their health and in other areas of their lives.

3-Then find a triggering event, or else create one of your own. Associate yourself fully by asking, 'what will it cost me if I do it?'

4-Take action, each action you take strengthens your commitment and raises the level of your emotional intensity and conviction…

5-Repeat your action seven times in a day and 40 days continuously…so you easily transform one habit to other…

Project and Project Management

All or every task is called 'Project' e.g. washing, sewing, syllabus, constitution etc. and it has following ingredients:

- **Vision/Objective**
- **Mission**
- **Strength (Individual and Team)**
- **Team with expertise**
- **Required finance and its management**
- **Strategy/Methodology**
- **Actions with time-line**
- **Risks**

Sagheer Ahmed

COMFORT ZONE
FOCUS ONLY ON NEED
UNNATURAL BELIEVES
POOR VISION OF LIFE
FROG IN A WELL
DARK LIFE
DEPENDABLE
POLAR PATIENT
NEGATIVE THOUGHT
RIGID
AIMLESS
EXCUSE

Chapter #03 Comfort zone

It is a hypothetical zone in our brain, as we know that repeated things convert into habits so in our brain make paths according to these habits therefor brain of this zone people are different which is called comfort zone…

Story of frog in a well (Comfort zone peoples):

A frog lived in a dry well all the year round (same like comfort zone people), and was very satisfied with its own small space (because of poor & limited data). One day, the frog looked up to the mouth of the well and saw a big turtle looking into the well (same like peoples of others zone). Immediately it became excited and said to the turtle: "You're lucky enough today! You'll be eye-opening. Let me show you my room. Have you ever seen such a big house?" Then, the turtle bowed its head and looked into the bottom of the well (according to volume, not very big), finding that it was just a small well where there was a pool of shallow water and a layer of mud covered with green moss, sending off a blast of tangy stink. The turtle frowned and retracted its head quickly. Completely ignoring the turtle's look(it is also the habit of comfort zone people,…,ignoring the reflection eye), the frog continued boasting: "It's very comfortable to live here!(People who live in dark cave, hate the light of sun) I can jump to the rail of the well to enjoy the cool in the evening, sleep in the hole of the well's wall in the night, swim in the water, and roll about in the mud. …" The frog became more and more complacent while talking: "Look! Both this pool of water and this well belong to me.

I can do whatever I like (Comfort zone peoples think they live with ideal life style). Don't you want to come in and have a look, dude?" The turtle kept shaking its head and seriously said: "Buddy, you have a narrow and limited horizon as you stay in the well all year round. I'll make it clear: The sea owns boundless water without an end. Its vastness cannot be described with thousands of miles, neither can its depth. After the flood in nine years out of ten, the seawater does not increase. After the drought in seven years out of eight, the seawater does not reduce. The sea is so huge that the time, drought and flood cannot make its quantity change obviously (Visionary example). I live in such a sea. Comparing it with your such a dry well with a pool of shallow water, do you think whose world is wider and funnier?" The frog opened its eyes and mouth wide, saying:

"how much water in the sea? Turtle replied too much, frog said equal to two well(He think according to his capability of mind), Turtle replied more than two or four well, then frog inhale breath, expand tummy, and open hand and said greater than this, Turtle replied too much greater than this, then frog try to inhale more and try to expand more but suddenly blast(Mostly end of closed mind peoples are same), Turtle replied too poor comfort zone peoples. Not until that moment did it realize that how narrow its own vision was.

Above story is the best example of comfort zone peoples, we live whole life without any productive out-put…

Comfort zone destroy your productivity:

Live in comfort zone is same as the example of someone has hundred million rupees but he/she live like a beggar.

Cage is cage other than this, its made by iron or gold…

Comfort zone destroy the all potential, ability, and capability of human, and they transform day to night like a crusher bull.

In a comfort zone too much silence but not peace, history shows that who live in this zone they died with the same title and known as ordinary person.

A ship in harbor is safe but that is not what ships are built for…

Habits of comfort zone peoples:

It's a true saying 'first you make habits then habits make you', now we will try to discuss some important habits of those people who live in comfort zone…

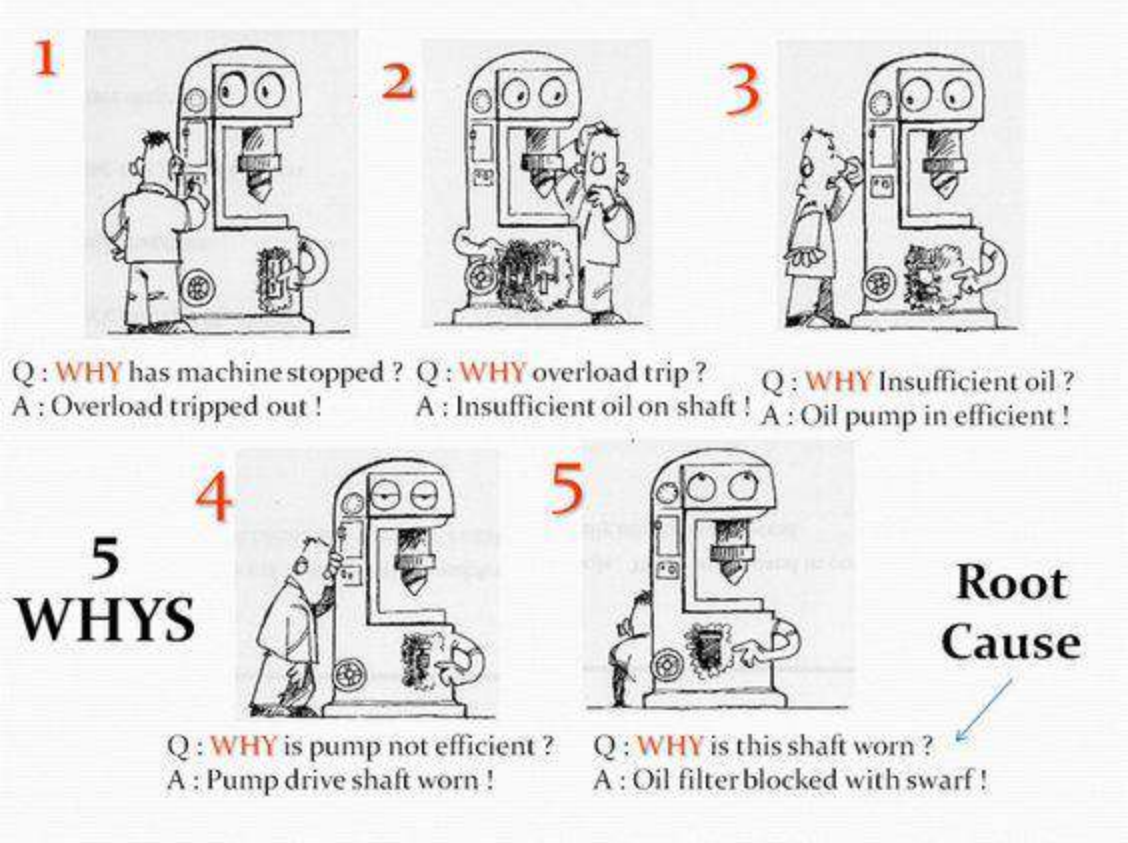
- ***Excuses:*** People of this zone mostly give you excuses e.g. money excuse, health excuse, gender excuse, country excuse, era excuse, family excuse etc.
- ***Apply law of dosra:*** It is the interesting thing this zone people are not accepting their mistakes and asking that it is others fault…
- ***Focus only on needs:*** They live like animal, only fight for or working for needs…day to night and night to day only needs, needs, and needs their first and last priority…
- ***Poor knowledge of aims/visions:*** This zone people has no aims and no visions, and according to my last 30 years' experience they are too much confuse in aim/need/wishes…
- ***Too much negative thoughts:*** They start discussion from the negative words, they always saw the dark side of picture, they discuss half empty glass…
- ***They think they know all:*** If somebody tell them any creative and out of this zone things so they quickly reply 'I know very well'…
- ***Many types of personality disorder***: Quality of this zone when you live in this 'well' you became

Sagheer Ahmed

psychological patient and many types of personality disorders e.g. Schizophrenia, mania, polar, hypertension…

- ***Dependent:*** People of this zone mostly not decision makers, they are dependent on others, because of that they are slow presenter…
- ***Eat and drink only for survival:*** They live like animal survival, eat and drink not with respect to aim but only for needs…
- ***They have lot of free time:*** When people are not planning their daily routine then they have lot of free time…for nothing…
- ***Poor knowledge of medicine:*** They think doctor is the holy persons and believe on them blindly and not cross check them…
- ***Un-natural believes:*** Because of poor reading habit and research, their believes are mostly un-natural and human made… not the holy, so these believes are not result oriented…
- ***Waiting for ideal condition:*** It's also the type of personality disorder, they need ideal conditions for any work and wait, wait, and wait but nothing do anything…
- ***Wait for miracles***: Miracles belongs to Allah, but if you totally depend on miracles then you live in pseudo world…
- ***Phobias:*** When fear exist some days continuously then it transforms into phobias.
- ***Rigid:*** Comfort zone people mostly inferiority complex peoples so they cover this weakness by rigidness…
- ***Too much ignorant:*** Learner is aggressive and dull is ignorant, so this zone people have this habit…
- ***Poor knowledge of religion:*** Poor learner mostly blindly believer so this zone people mostly poor knowledge of religion therefore blindly believer…

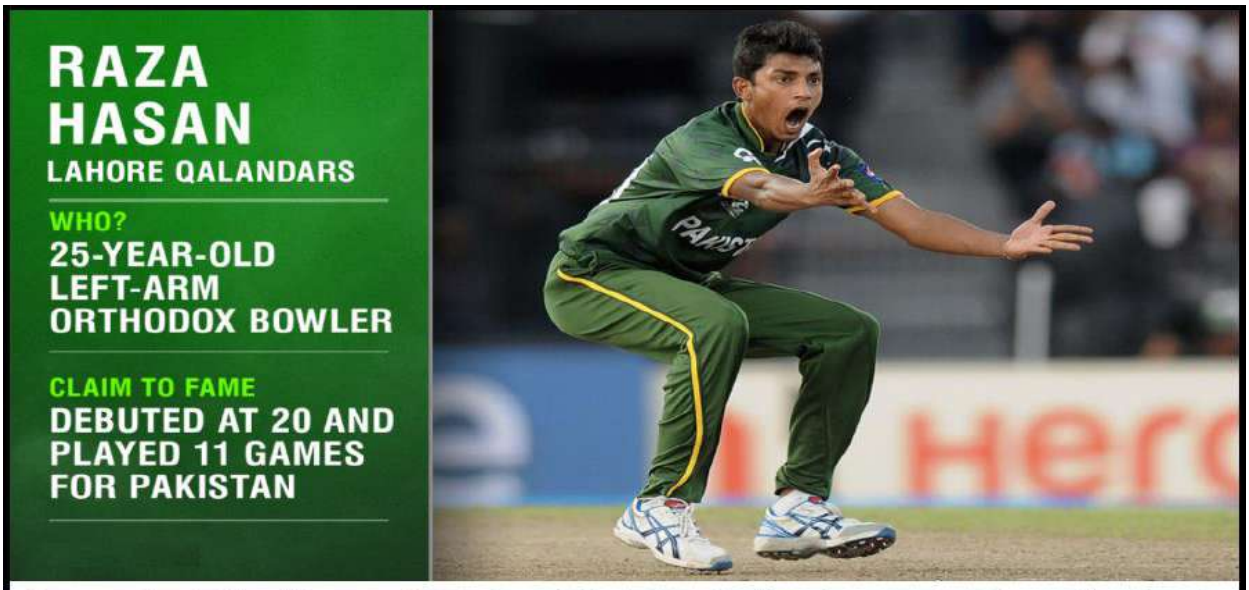
Sagheer Ahmed



Examples from world….

- Raza Hassan
- Saghir Siddiqui
- King of Baghdad and Halaku khan

Sagheer



One evening in May this year, Aaqib Javed, the former fast bowler, coach and now director of cricket operations with Lahore Qalandars, saw a hard-up looking boy standing just outside the NCA's main entrance.

"I saw this boy wearing dirty clothes and torn shoes, but there was still some mischief on his face," Aaqib told ESPNcricinfo. "I stopped and realised it was Raza Hasan, a sensational prospect for Pakistan when I left for the UAE coaching job in 2012.

"I called him over and asked, 'What have you done with yourself?' He had a lot of complaints about his life, whining about so many things. I picked him up and took him to our Lahore Qalander academy in Lahore.

"His ban was over by then but no one was accepting him back as he was in a terrible state, broken badly, and he required extensive rehabilitation which he could not afford to do on his own."

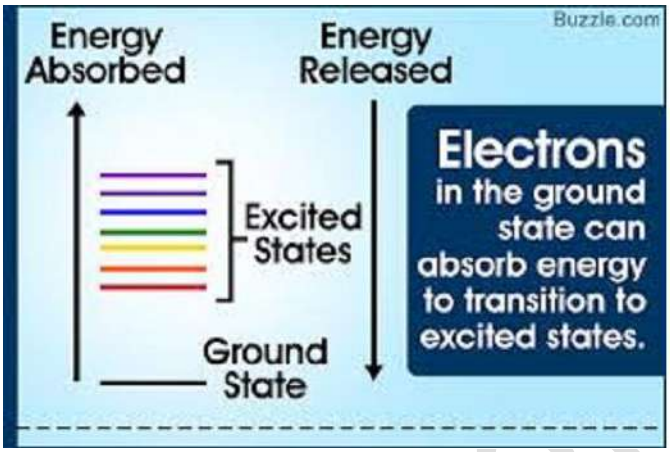
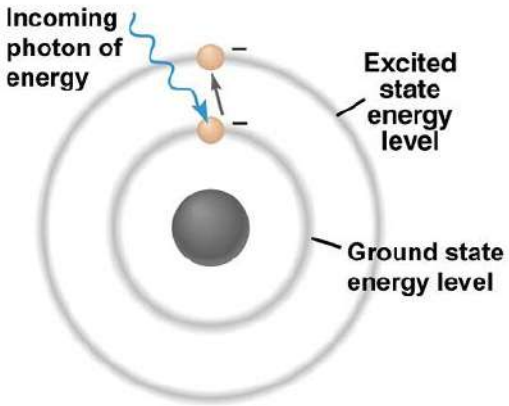
Chapter # 03 Excitement zone

In quantum mechanics, an **excited state** of a system (such as an **atom**, molecule or nucleus) is any quantum **state** of the system that has a higher energy than the ground **state** (that is, more energy than the absolute minimum). But it's not a stable state if you do not continues give energy then go back in comfort zone and if give energy then jump in to action zone…





Everybody wants success but some people have ability to pay its price…

*The **Pakistan national field hockey team (example of excitement zone)** is lead at once upon a time. They have been a member of the International Hockey Federation (FIH) since 1948 and founding member of the Asian Hockey Federation(ASHF),which formed in 1958.Pakistan is the most successful national field hockey team in the Hockey World Cup with four championships(Golden era of Pakistani Hockey):1971,1978,1982 and 1994. Pakistan also has the best overall performance in World Cup history in both proportional and absolute terms with 53 victories in 84 matches played, seven time draws, six appearances in the finals and only 24 losses (Many books had been written on their techniques). Pakistan national team has played in all FIH World Cup editions with only one absence in 2014. The green shirts(Pakistani national Colour) is*

also one of the most successful national teams in the Asian Games with eight gold-medals(great history of Pakistan Hockey):1958,1962,1970,1974,1978,1982,1990 and 2010, the highest number of times a country has come first(at that time Pakistan could not think about 2nd or 3rd position), and the only Asian team to have won the illustrious Champions Trophy with three championships: 1978, 1980 and 1994. Pakistan have won a total of 29 official international titles to professional and grassroots level selections, with three gold medals in the Olympic Games field hockey tournaments in Rome 1960, Mexico City 1968 and Los Angeles 1984(at that time Pakistani hockey live in success zone).

As we know that, Field hockey being the national sport of the country(Pakistan), Pakistan national team has been ranked as the #1 team in the world from 2000 till 2001 by FIH, and former captain Sohail Abbas holds the world record for the most international goals scored by a player in the history of international field hockey, with a tally of 348 goals Waseem Ahmed holds the record for Pakistan shining view, having played 410 times between 1996 and 2012.

(Jump from success zone to comfort zone) Suddenly because of poor management and planning, Pakistani hockey down back in the comfort zone, after some struggling of years, we became in an excitement zone and if we continue work hard then achieve action zone otherwise, we will jump back in comfort zone…

Mind-set and Learning:

Our whole body consist of following things:

- Brain (Hardware part of nervous system)
- Mind (Software part of nervous system)
- Hormones (or bio-chemical, messenger for N.S.)
- Bones & Meat

Here we discuss only mind (software of NS), mind has two types of software, first firmware which is built-in from Allah e.g. eating, weeping, pouty etc.

…and second type of software are those which makes our faith, which makes our filters, which makes our habits, and which makes our daily routines.

Haphazard data is called "Noise" …

Disorganize data is called "information…

Organize data is called "knowledge" …

Knowledge with self practice is called "learning" …

Learning with training to others is called "wisdom"…

Walking increases brain activity…

Habits of Excitement zone peoples:

- ***Accept their mistakes:*** Peoples of this zone starts to accept their mistakes, listening reflections, and thinking on it…
- ***Inspire with others achievements:*** In this state they admire others achievements, and wish to learn from these achievements and also doing to these in brain only…

- ***Broken the rigidity:*** Another positive sign of this zone peoples, their rigidity has been broken, and they came in calm state…
- ***Sort out aims and needs:*** Now they look on their life with the respect of aims and needs, and also sort out how many things belongs to aims and how many belongs to needs…
- ***Compare gathering:*** Peoples of this zone, now design discipline or filter by which they test their gathering and find it good or not…
- ***Un-complete projects:*** Comfort zone peoples are not interested to do any projects but excited zone people try to doing projects but un-complete…
- ***Find the difference in healthy mind:*** Now this zone peoples working on health and finding data for their health and health of their surroundings…
- ***Willing to risk:*** Habits of risk is the great difference between ordinary and winner, so this zone peoples start to taking risk but with many thinking…
- ***Give time to thinking:*** This zone peoples manage time for thinking and now they realize that creativity depends on relax thinking…
- ***See/Watch motivational videos:*** Comfort zone peoples not accepting other views so they do not saw motivational videos, but when they interred in excited zone, they start to watching motivational videos and note the important points…
- ***Learn reaction and response:*** There are two types of peoples in our world, one is learner and other is reflector, learner shows response and reflector shows reaction, so this zone peoples are starts to response others.
- ***Not interested to discuss problems:*** As we know that comfort zone peoples always discuss problems, but this zone peoples now ignore to discuss problems, they feel it’s not good to always discuss problems…

Sagheer Ahmed

- ***Find skills:*** By using my design formula (Sagheer's formula of finding skills) of skills and finding your unique skill or skills…

Steps for jumping into action zone:

- Repeat minimum five times daily which motivate you and you jump in excitement zone…
- Divide the whole day according to following:

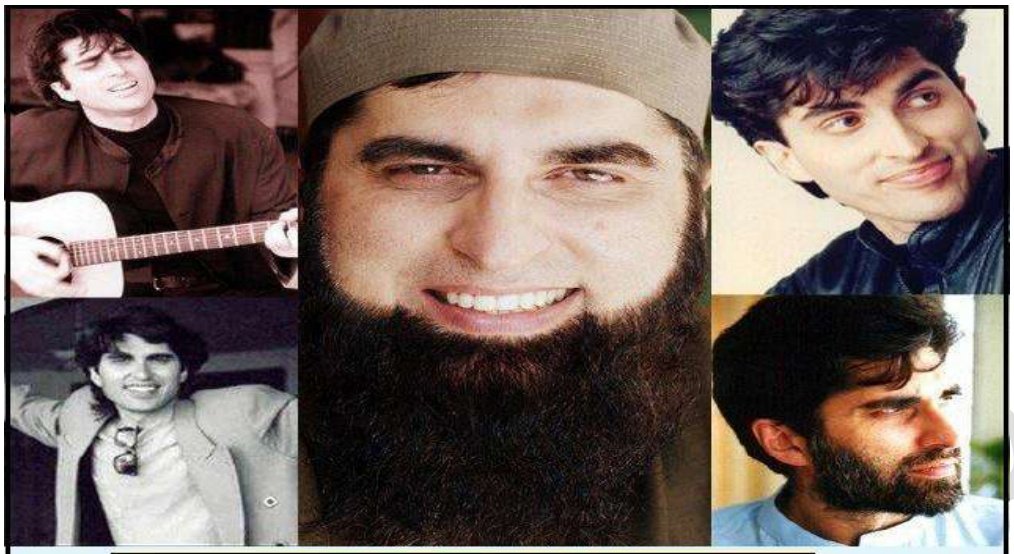
1. Necessary works e.g. jobs, university,
2. Reading and listening/watching motivational videos according to your level and aims (once daily not more, above than limit disturb you and boring you)
3. Transform your daily vocabulary approximately 25% according to aim and discussing those points which you learn from point 2.

- Consider this zone as an opportunity to leaving comfort zone and entering to action zone…
- Look at your growing side and realize your inner if in this minimum time I get these things then why not! I continue it…
- Look at your strength and weakness at the same time and manage your weakness and growing more strength…
- Learn daily chart and try to understand it… (for sample **visit: www.kunworld.com**)
- Minimum 40 days required to cope up any bad habit and inhale new habit…
- Give the live example yourself which belongs to this zone…

Examples of this zone:

- Junaid Jamshed

Sagheer Ahmed



JUNAID JAMSHED

SEPTEMBER 03, 1964 TO DECEMBER 07, 2016

RESIDENCE: **Karachi, Pakistan**

EDUCATION:
Bachelor of Science
University of Engineering and Technology, Lahore

EXPERIENCE:
Aeronautical engineer
in Pakistan Air Force
Musician & songwriter
(1987-2004)
Islamic preacher

HIGHLIGHTS:

Gained global recognition as lead singer in Pakistani rock & pop band Vital Signs

- In 1994, released debut solo album
- In 2004, drifted away from music career and focussed on preaching Islam
- Involved in charity work with NGO Muslim Charity

Was on Tablighi Jamat mission with one of his two wives, when his plane crashed near Khyber Pukhtoon khuwa...

Chapter #05 Action Zone

If I remember "Time Topology" so we find following definition:

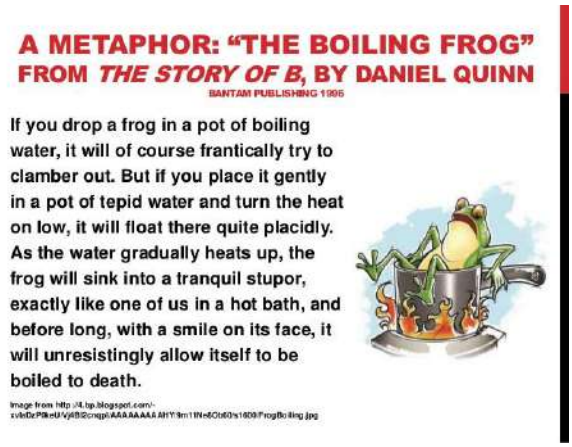
Action = (Energy) (Time)

So, according to this definition every action needs energy and time, if ignore any of one thing then our action must be disturbing…

Story of the man of success zone person, who 100 times fall down…, and 101 times get back…without arms and legs man…name of this man is Nick Vujicic

Nick Vujicic was born in city of Australia i.e. Melbourne, with the rare disease of Tetra-Amelia disorder; in which person are limbless, missing both arms at shoulder level, and legless but with two small feet, one of which has two toes.

Many times, in life, Nick felt hopeless, broken-heart, and feel alone. Motivational movement in his life (so called turning point) was when his mother showed him an article in newspaper about a man dealing with a severe disability. This motivated Nick that he wasn't the only (Alien)one dealing with a huge obstacle in life. He decided to fight for happy life.



Today, Nick proved that life is not easy or difficult, your attitude decided it. Now he is a motivational speaker, and Director of the non-profit organization, Life Without Limbs. He's traveled to many countries all across the world to give motivation to peoples, and tell them, about disability and hope.

"I'm down on earth. I down, Face down. And I also know that I have no arms, no legs. It should be impossible for me to get back up, if I weak minded person. But it's not. You see, I'll try 101 times to get up because I am strong minded. I give up, do you think I'm ever going to get up? No. But if I fail, I try again, and again, and again, (it's a great lesson for us)"

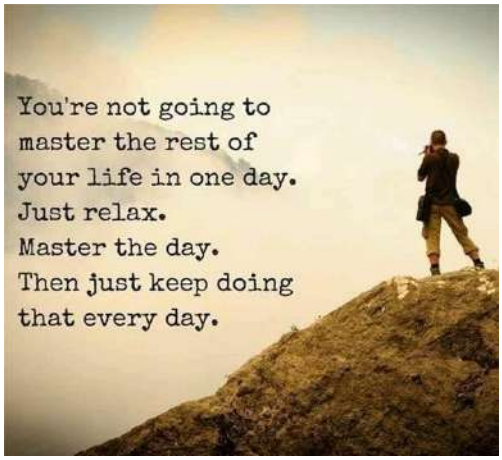
Great words of Nick:

"It's not how you start. It's how you finish."

Actions speaks louder than your words…

Habits of Action Zone peoples:

- ***Well define aim:*** Action zone peoples has well defined aim because our thinking process starts from aim, so it's a motivational factor and booster for all actions…
- ***Apply motivational videos:*** In excitement zone you only watch motivational videos and note down important points, but in this zone, you apply all those points which's satisfied you…
- ***Give answers by actions:*** Comfort zone peoples' words greater than actions, and excitement zone peoples' reconsider it, but this zone peoples' words are equal to their actions…
- ***Discuss winners:*** Your brain makes cognitive paths according to your given data so if you put data of loser then you got paths like losers and if you give data about winners then you got paths like winners there always discuss winners…



- ***Day starting and day closing according to planner:***

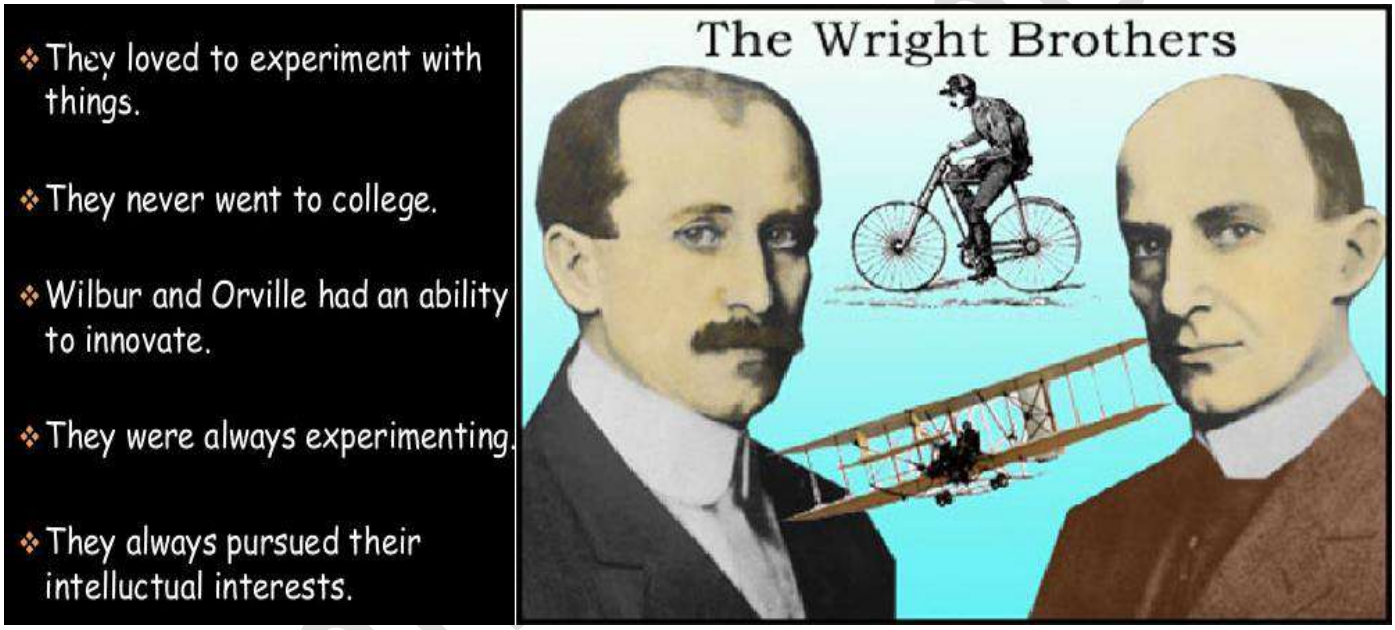
Sagheer Ahmed

Unplanned persons live like animal or it's called animal survival…

- ***Eat healthy food w.r.t aim:*** In this zone peoples knows very well about the role of food and diet in daily life, so they eat according to aim, they know body requirement with respect to vitamin, minerals and all others ingredients…
- ***Design believes by the study of thinkers:*** As we know that comfort zone peoples live with/in blind and dark faiths, but action zone peoples inhale only those believes which's belongs to 5 stars' research so they do not accept blindly faith…
- ***Use skills:*** In excitement zone you find your skills, and this zone you shine those finding skills by acting on examples…
- ***Replace excuses to strength:*** Extra-ordinary habit of this zone people, they delete excuses from their hard-disk, and they transform their excuses in their strengths e.g. Nick vivjick
- ***Eliminate negative thinkers from the friends 'list:*** As we know that fortune favors the bold, so eliminate the negative thinkers from your friends' list is the brave step, this zone peoples has this habit…
- ***Catch opportunities from the road:*** This zone peoples do not wait for opportunities to sit at home they go to road and catch/grip the opportunities according to own skills…
- ***Work on small habits:*** Action zone peoples starts their working with small habits and small projects, and manage themselves to these habits e.g. work w.r.t to targets, always speaks with reference, small but complete projects…
- ***Right use of "NO":*** They do not feel any hesitation to say 'NO' against the wrong/bad wish of other related to them…

Sagheer Ahmed

- ***Do exercise daily:*** This zone peoples knows that the importance of fitness because they are good learner, so they do daily exercise i.e. CrossFit…
- ***Apply rule of positive thinking:*** Old saying "Trees have the properties of seeds" so this zone peoples always look as a solution not as a problem; therefore, they are happy…
- ***Do independent work:*** Acton zone people are brave; they help others but they work with team but not totally rely on team, they feel happy to work with independently as well as with team…



Steps for jumping from Action zone to success zone:

- Allah give, your eyes at front of head because you always look forward and use past only for learning…
- Pareto's principle of 80:20 rules is good for our life, so accept it. You have four types of results:
  1. ***Failure***: If you live in comfort zone not think to do anything…
  2. ***Braver:*** You work for anything and you are not gain it and no gain any type of learning…

3. ***Successor:*** You work for which's things you got it without learning…
4. ***Learner:*** You work for which's thing you could not got it but learn many things in this process…
5. ***Wiser:*** You work for which's thing you got this thing with great learning…

So, failure is poor result and all of others are good so if you became 1 wiser, 2 successors, 3 learners, and 4 failures result, it's great and after some time you enter easily success zone…

- 2 small projects and one big project per year…
- Always consult and supervision of one mentor (who is always winner) …
- Make YouTube channel, and note down feedback…
- Also use proper social network e.g. Facebook
- Try to discuss with friends and family…
- Try to deliver lecture at any suitable place…

4 Tips to dramatically improve any skills:
1-R: Reaching and Repeating
2-Engagement, with examples
3-Purposefulness
4-Strong, speedy feed back

Chapter # 06 Success Zone

What is the meaning of success?

When you feel peace to doing daily work and your disturbance level in their minimum level…you distribute peace and your surrounding celebrate peace…

Morris Goodman: Miracle Man

(It is the great example of this zone (& law of attraction)).

On March 10, 1981, Goodman was flying a single-engine Cessna 172 around Chesapeake Bay. That time his age Thirty-five years and by profession; one of the top life insurance agents in the world.

I remembered last movements; As I prepared to land, the setting sun reflected off the water. "It looked like a million diamonds just for me," he recalls. "I was at peace with the world." But his engine suddenly lost power during the runway approach, and Goodman saw power lines directly in front of his windshield. The plane ripped through the high-voltage cables and flipped as it crashed in a field.

After 22 minutes of this accident, he is in hospital emergency room. Doctors too much disturbed and confused; diagnosed a broken neck and crushed spinal cord, jaw and larynx. The nerves in his diaphragm were so badly damaged he couldn't breathe (80% lost body). But something favors him(lucky), a tracheotomy was performed, and he was connected to a respirator. But at same time, his bowels, bladder and kidneys weren't functioning properly. He was unable to swallow. He needed care at a hospital with more resources, so he was rushed to Norfolk (Va.) General, 40 miles away (Suggestion of doctors).

There, his family was told to prepare for the worst (It's a bitter truth of this world). "The doctors said it was unlikely he'd make it through the night," his sister Pat Waldo recalls. Goodman defied the odds by surviving a nine-hour operation, his body totally stitched together with wire and plastic. But the outlook was still showing his serious condition. "We had to feel that he wouldn't have functioning below his ears," Waldo says. "His responses show that, he might be able to see and hear, but speech was unlikely, and also he'd have no movement from the neck down which was disturb our hopes."

Day and night were going fastly,8 months after the crash, he walked out of the hospital.

Universe is the integral part of human or Human is the integral part of Universe…

His biography is so interesting, as a young adult, he seemed to lack the drive and focus to overcome great obstacles. In fact, He was a somewhat aimless college dropout on a 13-week trial as a salesman with a life-insurance company when he saw Hill's Think and grow Rich paperback in a drugstore.

"If someone can get rich just thinking about it, that sounded pretty good to me," Goodman recalls this law of attraction, speaking in his light Southern drawl from his Virginia home. The book sat on his nightstand for weeks, "but it wasn't working by osmosis process." Goodman finally cracked it open.

Message of this great author was simple, and for him, create a complete picture on his mind: ***"Whatever the mind of man can conceive and believe, it can achieve." (You can and you can't both are belonging to your state of mind).*** Those words were "the beginning of a new life for

him. [They] made him realize how much power we have within us." Up to then, he says (and decided), "I'd pretty much wandered through life, letting circumstances dictate what I would and wouldn't do."

Now he applies law of attraction on his life, and began to shape the kind of life he wanted.

When he crashed his Cessna (life changing journey), Goodman was well on his way to reaching his goal of selling $15 million in insurance policies that year.

"By the mile it's a trial; by the yard it's hard; but by the inch life's a cinch!"

Goodman's family stood by his bedside a week or so after the accident—monitors all machines' readings; many time catheters and a ventilator maintaining body functions—and remembered a teenage conversation with him. They all become in anxious state when think his future… "would be tied to a machine for the rest of our lives,".

Goodman were fighting with death, and always remembered; yes, yes, yes, I want to live. He did everything in his power to stay alive."

One of the key factors of his life, blinking of eye became his means of communication. Goodman's nurses, doctors and visitors, all of his well-wisher would be working on him that he started to use mouth and other body parts. He'd blink if the answer was yes. Next, they'd pinpoint the line, and, finally, the letter.

Every word has consequences, Every silence, too…

Every aspect of miracle-man's recovery was equally painstaking, not only for him but for all family members. To prevent him from drowning in his own fluids, the plug

to his tracheostomy was removed every 4 hours and mucus or dirty fluid suctioned from his lungs with a medicated-tube and vacuum pump inserted through the small hole in his throat. For months he had to wear a halo vest. Everybody feels happy to saw the improvements, … The Frankenstein-like device, which supported the muscles of his neck, was attached to his skull with screws that were tightened with a wrench. Each turn of the wrench caused blood to flow and pain so excruciating.

This exercise gives good result, in which every time the respirator took a breath for him, he'd attempt to inhale, first 100, then 200, and later 300 times in a row in his struggle to breathe on his own again (breath of/for life). Once, he told; no one about this grueling program, which took hours at a stretch, for fear the doctors would tell him his goal was unattainable. But he told that "Without a 100 percent commitment, I couldn't have sustained the belief that I could succeed." On May 25—2½ months after the crash—Goodman was taken off the respirator, he improves day by day.

After the improvement of respiration, next, he focused on relearning motor skills. With neurological damage sending poor signals (with respect to quality and symmetry) to his nerves and muscles, this was an immense cognitive challenge as well as a physical one. By the help of occupational therapy and struggling so many hours, he could be able to took a ball."

At final his faith and struggle got success, he was finally allowed to eat solid food. Given a steady diet of chopped turkey, a food he detested, he went on a hunger strike, soon enjoying milkshakes and grilled-cheese sandwiches.

Goodman (really miracle man) had set a goal: He'd walk out of the hospital without mechanical assistance before Christmas.

He beat that deadline by a month: He was home for Thanksgiving. What is the learning moral for us in this story that action zone peoples have great faith and prove it by actions…?

Last but not least:

0.You/we are too important to Allah therefor He created you/us.

1. In life it doesn't matter how many times you/I failed (so called) and fall down. But life depends that what are you/I learning from it and get back up.

2. Live each day as if it's your/our last day. It just might be.

3. Set goals, can stay passionate about and by this go near to Allah. Passion has too much potential energy.

4. Find the skills, believe on skills, shine the skills, use the skills.

5. Start each day with prayer and reciting of Holy book. Thank God daily for everything. Gratitude improves attitude.

6. Money is only the one ingredient of life, and also remember, money can buy a nice house but it can't buy a happy life in this house. Money can buy a nice bed but it can't buy a peaceful night's sleep. It can buy medicine but it can't buy health. And it can buy companionship but it can't buy love.

Habits of success zone peoples:

- ***Content base life:*** One of great beauty of success zone peoples they live content base life, they know the difference between profile generate after completing task and before completing task…
- ***Help the others:*** They complete the journey from comfort to success zone therefore they know the problems of others three zone peoples so they are giver without any thought of confusions…
- ***Always speaks and acts positively:*** They are not chatter box, mostly speaks with actions therefore their surroundings too much trust on them…
- ***Each minute of life is well-define:*** Success zone peoples knows very well about the importance of time so they use every minute of life, they not only use busy time positively but also use leisure time…
- ***Open minded:*** Peoples belongs to success zone are not rigid, they are open minded, their limits are not too tied but there is one important point that open mind under the limits of their religion…
- ***Design and apply life planner:*** By the help of their consultant (personality coach) they design life planner and apply this planner on life…

Sagheer Ahmed

- ***Enjoy the technology:*** As above define peoples of this zone are not rigid so they also proper use technology and not limit ourselves from the technology and also link world with use technology…
- ***Obedient to Allah:*** They know very well about Allah therefore they are obedient and down to earth…
- ***Spread peace and love:*** They have inner and outer peace (and also know the formula of peace and love) therefore they spread peace and love…
- ***Two alternate days are not similar:*** They are aggressive and creative therefor they always busy to do something new so we found their all days are different according to results…
- ***Design and perform own fitness exercise:*** As we know that healthy mind has healthy body and I think so healthy mind-body people enjoy the life with 99% so this zone people manage their life according to all 5 dimensions including health, find those unique exercises which are pure needs of their life and aim…
- ***Design video channel and share own success stories:*** This zone peoples are wiser as well as successor so now they want to share their success points with the remaining world, for this, they create their own channel and share tips…
- ***Try to generate new skills:*** By using Sagheer's skills analysis test they found skills and also shine and then use skills now they go to one step more they generate new skills in their personality and apply on life…
- ***Produce leaders not followers:*** At every stage of life they are agree to help other for grooming their personality.
- ***Free from fear:*** they have not any type of phobia they like to accept challenge…
- ***Mentor of many persons:*** Teaching is the science, so this zone people know it, they took this and guide many peoples and at the same time feel happy to teach and train them…

Sagheer Ahmed

- ***Has so many ideas:*** This zone people delete garbage from their mind so they generate too many ideas, they use ideally short-term memory… new ideas, old ideas with new flavors, sum of two or three ideas, small version of big ideas…
- ***Pride for all:*** Their family, friends, teachers, students, and all of their surrounding feel pride on them…
- ***Write own auto-biography:*** This zone people know very well about importance of auto-biography because man is mortal but not his/her thought, and they also know that thoughts rules the world…therefore they write auto-biography with heart and soul…
- ***Minimum 25 small but complete projects per year:*** Success zone people shows their strength by actions not by words, so they complete minimum 25 small projects per year, which are motivate their followers…
- ***Minimum 5 big projects per year:*** Big projects need big planning and big management abilities, so this zone people prove it and do complete minimum 5 big projects…
- ***Peaceful End:*** It's a great sign of/for this zone people that the end of successor is too much peaceful, death is not the accident for them, death is the only migration from this world to Jannah…

Last but not least:

0.You/we are too important to Allah therefor He created you/us.

1. In life it doesn't matter how many times you/I failed (so called) and fall down. But life depends that what are you/I learning from it and get back up.

2. Live each day as if it's your/our last day. It just might be.

3. Set goals, can stay passionate about and by this go near to Allah. Passion has too much potential energy.

Sheer Ahmed

4. Find the skills, believe on skills, shine the skills, use the skills.

5. Start each day with prayer and reciting of Holy book. Thank God daily for everything. Gratitude improves attitude.

6. Money is only the one ingredient of life, and also remember, money can buy a nice house but it can't buy a happy life in this house. Money can buy a nice bed but it can't buy a peaceful night's sleep. It can buy medicine but it can't buy health. And it can buy companionship but it can't buy love.

The Eagle does not fight the snake on the ground. It picks it up into the sky and changes the battle ground, and then it releases the snake into the sky. The snake has no stamina, no power and no balance in the air. It is useless, weak and vulnerable unlike on the ground where it is powerful wise and deadly.
Take your fight into the spiritual realm by praying and when you are in the spiritual realm God takes over your battles.
Don't fight the enemy in his comfort zone, change the battle grounds like the Eagle and let God take charge through your earnest prayer. You'll be assured of clean victory.
Pray without ceasing.

Sagheer Ahmed
